GLYCO®

MORE THAN 5x LONGER LIFE BEARING SHELL & CRANKSHAFT

The Glyco IROX® bearing overlay increases the life of bearing shell and crankshaft by more than 5 times in the most demanding applications and drive cycles such as start-stop and hybrid.

These innovative, IROX® polymer-coated bearing shells increase impact absorption and wear resistance in mixed lubrication mode, and can withstand momentary operation without lubrication.

Being so effective, Glyco IROX® can even be used on highly affordable aluminium based linings and is applicable if fitted as Original Equipment.

LESS FRICTION, LESS EMISSIONS

NOTES

Note Nr.				
1	"SPUTTER" upper half bearing	"SPUTTER" obere Lagerhälfte	Semicuscinetto superiore "SPUTTER"	Demi-coussinet supérieur "SPUTTER"
2	"SPUTTER" lower half bearing	"SPUTTER" untere Lagerhälfte	Semicuscinetto inferiore "SPUTTER"	Demi-coussinet inférieur "SPUTTER"
3	All gas and marine engines must be equipped with the "SPUTTER" connecting rod bearings	Alle Gas- und Marinemotoren müssen mit dem "SPUTTER" Pleuellager ausgerüstet werden	Tutti motori a gas e marini devono essere equipaggiati con cuscinetti di biella "SPUTTER"	Tous les moteurs à gaz et marins doivent être équipés de coussinets de bielle "SPUTTER"
4	G-188	G-188	G-188	G-188
5	G-488	G-488	G-488	G-488
6	G-149	G-149	G-149	G-149
7	Trapezoidal	Trapezförmig	Trapezioidale	Trapézoïdal
8	With eccentric bore	Mit exzentrischer Bohrung	Con diametro eccentrico	Avec alésage excentrique
9	Compressor	Kompressor	Compressore	Compresseur
10	For cracked connecting rod	Für gebrochene Pleuelstangen	Per bielle fratturate	Pour bielle sécable
11	For reworked cylinder heads only	Nur für aufbereitete Zylinderköpfe	Soltanto per testate rilavorate	Uniquement pour culasses réusinées
12	The O.E. procedure requires that the intermediate shaft bushings are machined once fitted to optimize clearance, centring, and alignment. We therefore recommend our 'semi' bushings and to follow the same procedure.	Bei der Erstausrüstung werden die Zwischenwellen-buchsen nach dem Einpressen fertigbearbeitet, um Spiel, Verzug und Flucht zu optimieren. Deshalb empfehlen wir die Verwendung unserer 'Semi' Buchsen und die gleiche Vorgehensweise.	L' OE suggerisce per l'installazione che le boccole dell'albero intermedio di distribuzione siano lavorate e finite con tolleranza, centratura e l'allineamento corretti. Vi consigliamo le nostre boccole 'semifinite' e di seguire la stessa procedura.	En première monte, les bagu d'arbre intermédiaire sont usinées après montage pour optimiser jeu, centrage, et alignement. De ce fait, nous recommandons d'utiliser nos bagues 'semi' et de suivre la même procédure.
13	The following procedures must be carried out according to the manufacturer's manual: 1) Drill two holes in the bearing for the valve rocker's oil supply corresponding to the position of the oil channels in the housing. 2) Drill one dowel hole.	Folgende Vorbereitungen sind gemäß Werkvorschriftenhandbuch durchzuführen: 1) Zwei Löcher zur Ölversorgung der Kipphebel sind nachträglich ins Lager zu bohren; gemäss Lage der Ölkanäle im Gehäuse. 2) Ein Stiftloch bohren.	La seguente procedura và eseguita secondo raccomandazione del costruttore: 1) Effettuare 2 fori per l'alimentazione dell'olio dei bilancieri in corrispondenza dei canali di lubrificazione sull'alloggiamento. 2) Eseguire un foro sul perno di riferimento.	Les opérations suivantes doivent être effectuées selon le manuel du constructeur: 1) Percer deux orifices dans l coussinet pour l'alimentation en huile des culbuteurs en fa des passages de lubrification dans le carter. 2) Percer un alésage pour goujon.
14	After installation drill a 4 mm hole	Nach dem Einbau muss ein 4 mm Loch gebohrt werden	Dopo l'installazione praticare un foro di 4 mm	Après montage percer un tro de 4 mm
15	Undersize bearings width 0.75/1.00 mm is 34.6/1.3622" wide (semi) and resizeable to Std.	Die Unterstufen 0.75/1.00 mm haben eine Lagerbreite (semi) von 34.6/1.3622" und sind abdrehbar bis Std.	I cuscinetti, nelle minorazioni 0.75/1.00 mm, hanno una larghezza (semi) di 34.6 mm (1.3622 inch), barenabili fino a misura Std.	Les coussinets en cote réparation 0.75/1.00 mm ont une largeur de 34.6/1.3622" et sont rectifiables jusqu'à la cote Std.

HOW TO USE THIS CATALOGUE

Manufacturers are sorted in alphabetical order, as shown in the index. The panels have a progressive numbering per manufacturer. The bore is the first sorting criteria, starting from the smallest diameter, followed by the stroke, number of cylinders, petrol/diesel/gas and engine name. Engines fitting the same parts are panelled together and sorted in alphabetical order. Additional pictures, part specific information as distances between crank webs and thrust bearing location are given after each bearing type. Parts in red font are new range introductions.

BENUTZERHINWEISE

Die Hersteller sind, wie auch in der Liste, alphabetisch verzeichnet. Auf der Herstellerseite sind die Felder aufsteigend nummeriert. Die Bohrung ist das erste Sortiermerkmal, von klein nach groß, danach der Hub, die Anzahl Zylinder, nach Verbrennungsprinzip Benzin-/Diesel-/Gasmotor und dann folgt die Motorenbezeichnung. Motoren die gleiche Teile verwenden, sind in einem Feld zusammengefasst und innerhalb dessen alphabetisch sortiert. Auf die Angabe der Lagerart folgen weitere Abbildungen und teilespezifische Informationen, wie Wangenabstandsmasse der Passlagerstelle/Kurbelwelle und der Einbauort von Axiallagern. Teile in roter Schrift sind Neuaufnahmen in das Sortiment.

COME SI UTILIZZA IL CATALOGO

I costruttori sono elencati in ordine alfabetico, come indicato nell'indice. I pannelli hanno una numerazione progressiva per ogni costruttore. L'alesaggio e il primo criterio di selezione, iniziando dal diametro più piccolo, seguito dalla corsa, dal numero di cilindri, dall'alimentazione (benzina/gasolio/gas) e codice motore. I motori che montano gli stessi componenti si trovano nello stesso pannello, in ordine alfabetico. Foto supplementari, informazioni specifiche dei pezzi come le distanze sullo spazio necessario per il posizionamento deu cuscinetti flangiati sull'albero motore sono indicate alla fine di ogni pannello. I riferimenti in rosso sono i nuovi componenti introdotti in gamma.

INSTRUCTIONS POUR L'UTILISATION DU CATALOGUE

Les constructeurs sont classés par ordre alphabétique, comme illustré dans l'index. Les différentes sections suivent un ordre séquentiel par constructeur. L'alésage est le premier critère de tri, partant du plus petit diamètre et suivi par la course, le nombre de cylindres, le type de carburant (essence/diesel/gaz) et le nom du moteur. Les moteurs utilisant les mêmes pièces sont rassemblés dans une même section et classés par ordre alphabétique. Les photos supplémentaires, informations spécifiques sur les pièces et l'espacement pour l'emplacement des flasques de butée sur le vilebrequin sont données après chaque type de coussinet. Les références indiquées en rouge sont des nouveautés récentes.

CÓMO UTILIZAR ESTE CATÁLOGO

Los fabricantes se ordenan alfabéticamente, tal como se muestra en el índice. Los paneles cuentan con una numeración progresiva por fabricante. El alojamiento es el primer criterio de ordenación, empezando por el más pequeño, seguido de la carrera, el número de cilindros, el combustible (gasolina, diésel o gas) y el nombre de motor. Los motores que montan las mismas piezas comparten el mismo panel y se ordenan alfabéticamente. Después de cada tipo de cojinete, se muestran imágenes adicionales e información específica de la pieza, como las distancias entre la gualdera del cigüeñal en el lugar de ubicación de los cojinetes con pestaña. Las partes de color rojo son los nuevos productos de la gama.

JAK UŻYWAĆ TEGO KATALOGU

Producenci są uszeregowani wg kolejności alfabetycznej, jak pokazano na spisie. Panele mają rosnące numery według kolejności producentów. Pierwszym parametrem, wg którego następuje sortowanie jest średnica cylindra, zaczynając od najmniejszej średnicy. Następnie podawane są skok tłoka, liczba cylindrów, rozróżnienie rodzaju paliwa - benzyna/diesel/gaz i nazwa silnika. Silniki, w których zastosowano te same części są wymienione razem i uszeregowane wg kolejności alfabetycznej. Po każdym typie łożyska podawane są dodatkowe rysunki i charakterystyczne informacje takie jak odległość pomiędzy wykorbieniami czy umiejscowienie łożyska oporowego. Numery części podane w kolorze czerwonym oznaczają nowe produkty w programie.

КАК ПОЛЬЗОВАТЬСЯ КАТАЛОГОМ

Производители представлены в алфавитном порядке в соответствии с алфавитным указателем. Секции нумеруются по возрастающей по производителям. Диаметр отверстия - это первый критерий сортировки. Сортировка начинается с наименьшего диаметра отверстия, затем учитывается ход поршня, количество цилиндров, бензин/дизельное топливо/газ и наименование двигателя. Двигатели, на которые подходят одни и те же детали, объединяются в одну секцию и сортируются в алфавитном порядке. Дополнительные изображения, информация о детали (напр., расстояние между щекой коленчатого вала и упорным подшипником) приводятся после указания каждого вида подшипника. Детали, отмеченные красным цветом шрифта, являются новинкой в ассортименте.

GLYCO®

LESS FRICTION, LESS EMISSIONS
THE WORLD'S MOST TRUSTED BEARINGS

Glyco® bearings offer the widest range of coverage with about 2,500 references

There may be no better example of an Enabling Solution than developments in metallurgy. As engine designers deliver reduced CO_2 emissions by extracting more power from less fuel, temperatures rise, loads increase and conventional materials struggle. Federal-Mogul's Glyco® brand has been a leading Original Equipment supplier of engine bearings for more than 100 years and it remains at the forefront of technical developments that meet these challenges.

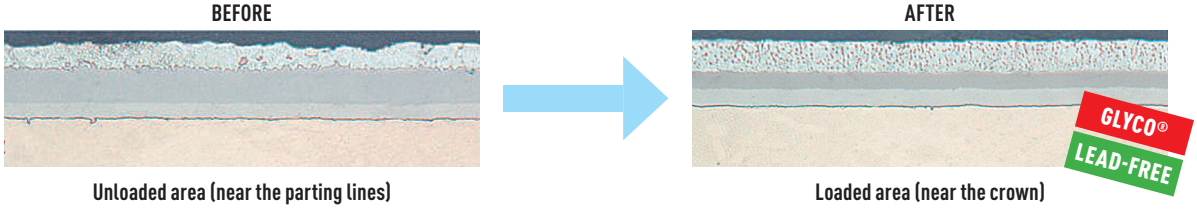
The new lead-free bronze is one of several ranges of new materials introduced by Glyco®, each optimised for a specific application but all sharing Federal-Mogul's commitment to light-weight, environmentally-responsible technologies. A lead-free bronze eliminates the possible health risks associated with lead in the environment and simplifies recycling. It also eliminates the porosity associated with lead, which contributes to increasing the maximum load capacity by up to 20 percent.

Lightweight engine parts result in greater deformation of the connecting rod and engine block and this, in turn, puts further loading on the bearings.

Glyco® Sputter Bearings, used by many of the world's most prestigious vehicle manufacturers, can withstand these very high loads, providing twice the durability of conventional bearings and a version has been developed specifically for engine rebuilders. The result is the 'intelligent' lead-free material G-488, which combines a Tin-Copper alloy with a Nickel / Tin-Nickel layer. The Tin-Copper layer is still relatively soft during the engine's initial running-in phase when it is required to bed-in against an existing crankshaft journal to provide a perfectly matched surface. Over time the engine's heat diffuses the Tin to form a hard, durable Tin-Nickel layer that gives the engine longer life. This high performance, carefully tailored to the repair of existing engines, is also more affordable as the technique uses electroplating rather than expensive sputter-coating.

Another big step in fuel economy and emissions reduction can be taken by introducing a start-stop system, an increasingly popular fitment on today's vehicles that may soon become universal.

THESE SECTIONS, TAKEN WITH A MICROSCOPE, SHOW HOW THE SURFACE CHANGES.



Unloaded area (near the parting lines)

Loaded area (near the crown)

Change of the layer system of G-488 – Diffusion of atoms increase the thickness of the Tin-Nickel layer

To avoid any impact on driveability, the engine is cranked very quickly as soon as the driver engages the clutch, potentially allowing metal-to-metal contact of the bearings before the protective hydrodynamic oil film is re-established. This was not an issue when engines were typically started only a few times a day, but with a start-stop system these conditions may happen many hundreds of times a day. The problem is compounded by the use of modern, less viscous oils with a thinner oil film, necessary to improve engine efficiency and further cut emissions. To solve this challenge, Federal-Mogul has developed an innovative, polymer-coated bearing shell that can withstand momentary operation without lubrication and is also ideal for the very high loads imposed by highly boosted engines. As well as increased impact absorption and wear resistance, Glyco® IROX® provides good thermal conductivity to keep the bearing cool and good embedability to trap any hard particles so they don't damage the bearing journals.

The Glyco® IROX® bearing overlay can help increase the life of crankshafts and bearing shells by more than five times in the most demanding applications and drive cycles such as start-stop. Glyco® IROX® is so effective that it is possible to use aluminium-based linings instead of the more expensive copper, helping to make this Enabling Technology highly affordable.

Federal-Mogul bearing technologies allow engine designers to continue to innovate so that CO_2 emissions can be further reduced and fuel consumption improved.

As perfect examples of Enabling Technologies, they remove barriers to progress. They also show why it is so important to replace like-with-like if emissions performance and durability are to be maintained. Federal-Mogul is one of the first companies to develop a new range of materials specifically for this very demanding application. Using sintering techniques, in which components are manufactured by squeezing and heating a blend of metal powders, allows the composition and porosity of the metals to be precisely tailored to match the performance characteristics required for the component. The result is substantially improved durability that enables another step in CO_2 reduction.

The majority of diesel engines in service today will have exhaust gas temperatures around 500-600°C, but driving up efficiency means higher pressure turbocharging and higher combustion temperatures. Oil oxidises at these ultra high temperatures, which is a particular problem for turbocharger bushings as they must not only withstand this intense heat, they must also manage the loads imposed by the very high rotational speeds of the turbine.

GLYCO®

WENIGER REIBUNG, WENIGER EMISSIONEN
WELTWEIT BEWÄHRTE GLEITLAGER

Glyco®-Gleitlager decken mehr als 2 500 Anwendungsfälle ab

Die besten Beispiele für die Weiterentwicklungen der Lagerschalen finden sich in der Metallurgie. Im selben Moment, in dem die Motorenentwicklungen mit mehr Leistung aus weniger Kraftstoff den CO_2-Ausstoß verringert, steigen die Temperaturen, sind die Belastungen höher und stoßen herkömmliche Materialien an ihre Grenzen. Die Federal-Mogul-Marke Glyco® bedient den Automobilbau seit mehr als 100 Jahren mit Gleitlagern und gilt seitdem als Technologieführer in diesem Bereich.

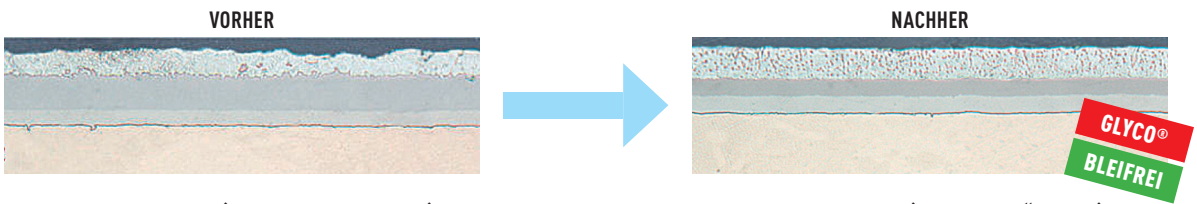
Die bleifreie Bronze ist einer von mehreren durch Glyco® eingeführten neuen Werkstoffen, jeder für eine bestimmte Anwendung optimiert und wie alle Federal-Mogul-Produkte auf geringes Gewicht und umweltverträgliche Verfahren getrimmt. Bleifreie Bronze schließt mögliche Gesundheitsrisiken die durch Blei entstehen können, grundsätzlich aus und erleichtert die Wiederverwertung. Blei ist relativ porös - die Bleiersatz-Legierung von Glyco ergibt daher sogar eine um bis zu 20 Prozent höhere Tragfähigkeit.

Der Leichtbau moderner Motoren fordert den Lagerstellen besonders viel ab, da Motorblock und Pleul eher zu Verwindungen neigen als bisher.

Glyco®-Sputterlager werden von zahlreichen Herstellern eingesetzt, sind hochbelastbar, erreichen die doppelte Standzeit eines konventionellen Gleitlagers, und sind in einer speziell für die Motorenüberholung konzipierten Version verfügbar. Bei dem eingesetzten „intelligenten" bleifreien Werkstoff G-488 handelt es sich um die Kombination einer Zinn-Kupfer-Legierung mit einer Nickel- bzw. Zinn-Nickel-Schicht. Die Zinn-Kupfer-Schicht ist während der Einlaufphase des Motors, in der sich das Gleitlager dem Kurbelwellenzapfen anpassen muss, noch relativ weich. Mit der Zeit setzt eine Diffusion der Zinn-Atome durch die Motorenhitze ein. Es entsteht eine harte, haltbare, die Lebensdauer des Motors verlängernden Zinn-Nickel-Schicht. Diese Eigenschaften sind für die Motorenreparatur optimal, zumal diese Schichten durch Galvanisierung im Vergleich zur teureren Sputterbeschichtung auch kostengünstiger herzustellen sind.

Eine weitere – und immer häufiger genutzte – Möglichkeit zur Reduzierung von Kraftstoffverbrauch und Emissionen ist ein Start-Stopp-System.
Damit die Fahreigenschaften nicht beeinträchtigt werden, wird der Motor - sobald der Fahrer die Kupplung freigibt und eine

MIKROSKOPAUFNAHMEN DER OBERFLÄCHENVERÄNDERUNG



Unbelasteter Bereich (nahe der Trennungslinien)

Belasteter Bereich („gewachsene" Schicht)

Veränderung des Schichtsystems von G-488 – durch das Diffundieren von Atomen wächst die Zinn-Nickel-Schicht

Gang eingelegt hat - sehr schnell gestartet. Dabei besteht die Gefahr, dass der schützende Ölfilm nicht rechtzeitig aufgebaut wird und es an den Lagerstellen zu Metallkontakten kommt. Solange Motoren in der Regel nur wenige Male pro Tag gestartet werden ergibt sich kein Problem, wohingegen bei einem Start-Stopp-System der Fall täglich vielleicht hundert Mal vorkommen kann. Verschärft wird die Problematik durch den Einsatz von Leichtlaufölen zur mit geringerer Viskosität. Zur Lösung dieser Aufgabe entwickelte Federal-Mogul eine innovative, polymerbeschichtete Lagerschale, die kurzzeitig ohne Schmierung auskommt und außerdem ideal für die in hochaufgeladenen Motoren auftretenden, sehr hohen Drücke geeignet ist. Neben der verbesserten Verschleißfestigkeit bietet Glyco® IROX® eine gute thermische Leitfähigkeit zur Kühlung der Lager sowie gute Einbettfähigkeit für harte Partikel, damit diese nicht zu weiteren Beschädigungen führen.

Die Lagerlaufschicht Glyco® IROX® kann selbst unter schwierigen Bedingungen, zu denen auch Start-Stopp-Systeme gehören, zu einer Verlängerung der Lebensdauer von Kurbelwellen und Lagerschalen um mehr als das Fünffache beitragen. Glyco® IROX® ist so wirksam, dass Beschichtungen auf Aluminiumbasis anstelle der von teueren Kupfer zum Einsatz kommen, was diese Technologie zudem kostengünstig macht.

Federal-Mogul-Gleitlagertechniken unterstützen Innovationen in der Motorenentwicklung zur weiteren Reduzierung der CO_2-Emissionen und des Energieverbrauchs.

Sie sind beste Beispiele dafür, wie mit neuentwickelte Technologien weitere Verbesserungen der CO_2-Bilanz erreicht werden können. Sie machen auch deutlich, warum im Ersatzbedarf Gleiches durch Gleiches ersetzt werden sollte, um Abgaswerte und Haltbarkeit zu erhalten. Federal-Mogul gehört zu den ersten Unternehmen, die verschiedene neue Werkstoffen speziell für diese anspruchsvolle Anwendung entwickeln. Sinterverfahren zur Herstellung von Bauteilen durch das Pressen und Erhitzen einer Metallpulvermischung ermöglichen es, die Zusammensetzung und Porigkeit der Metalle präzise auf die von dem Bauteil geforderten Gebrauchseigenschaften abzustimmen. Das Ergebnis ist eine wesentlich verbesserte Haltbarkeit - ebenfalls ein weiterer Schritt zur CO_2-Reduzierung.

Die Mehrzahl der heute im Einsatz befindlichen Dieselmotoren entwickeln Abgastemperaturen um 500 – 600 °C, wobei ihr höherer Wirkungsgrad zu höheren Ladedrücken sowie Verbrennungstemperaturen führt. Diese hohen Temperaturen führen zu einer Oxidation des Öls, welche für die Lagerbuchsen des Turboladers besonders problematisch ist. Denn sie sind nicht nur der starken Hitze, sondern auch hohen mechanischen Belastung durch die sehr hohe Drehzahl des Turbinenrads ausgesetzt.

GLYCO®

I cuscinetti Glyco® offrono la più vasta gamma di copertura, con circa 2.500 referenze

MINORE ATTRITO, MINORI EMISSIONI
I CUSCINETTI PIÙ AFFIDABILI DEL MONDO

Gli sviluppi nella metallurgia offrono il migliore esempio di soluzione abilitante. Mentre i progettisti dei motori conquistano la riduzione delle emissioni di CO_2 ottenendo maggiore potenza con meno carburante, la temperatura e i carichi aumentano e i materiali tradizionali ne risentono. Da oltre 100 anni, il marchio Glyco® di Federal-Mogul è un fornitore leader di cuscinetti per motori di primo equipaggiamento e rimane in prima linea nel campo delle evoluzioni tecniche messe in atto per vincere queste sfide.

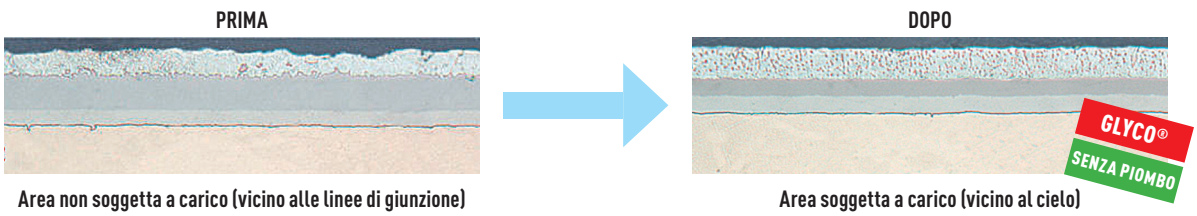
Il nuovo bronzo senza piombo è uno dei tanti materiali nuovi introdotti da Glyco®, ciascuno dei quali è stato ottimizzato per un'applicazione specifica ma che sono tutti improntati all'impegno profuso da Federal-Mogul nelle soluzioni tecnologiche ecoresponsabili con peso ridotto. Il bronzo senza piombo elimina i rischi alla salute derivanti dal piombo rilasciato nell'ambiente e semplifica il riciclo. Inoltre elimina la porosità dovuta al piombo, il che contribuisce all'aumento del 20% della capacità di carico.

Il peso ridotto dei componenti provoca una maggiore deformazione di biella e blocco motore, il che a sua volta, comporta un ulteriore carico sui cuscinetti.

I cuscinetti Glyco® a polverizzazione ionica, utilizzati da molti dei più prestigiosi costruttori di autoveicoli a livello mondiale, resistono agli elevati carichi e garantiscono il doppio della durata dei cuscinetti tradizionali. Per i rettificatori di motori è stata sviluppata un'apposita versione. Il risultato è stato il materiale "intelligente" senza piombo G-488, che unisce una lega di stagno-rame con uno strato nichel / stagno-nichel. Lo strato di stagno-rame è ancora relativamente morbido durante la fase di rodaggio iniziale del motore, quando deve assestarsi contro il perno di banco dell'albero a gomiti esistente per fornire una superficie perfettamente combaciante. Col tempo, il calore del motore diffonde lo stagno formando un duro e resistente strato di stagno-nichel che garantisce una maggiore durata del motore. Questa elevata prestazione, fatta su misura per la riparazione di motori esistenti, è anche più economica, dal momento che tale tecnica è riferita ad un processo galvanico diverso dal più costoso rivestimento a polverizzazione ionica.

Un ulteriore importante passo nel risparmio di carburante e nella riduzione delle emissioni potrebbe consistere nell'introduzione di un impianto start/stop, un elemento sempre più popolare sugli autoveicoli moderni che potrebbe presto diventare universale.

FIGURA A: QUESTE SEZIONI OSSERVATE AL MICROSCOPIO DIMOSTRANO COME CAMBIA LA SUPERFICIE



Modifica dello strato di G-488 – la diffusione degli atomi aumenta lo spessore dello strato di stagno-nichel

Vi è inoltre la problematica relativa alla guidabilità; quando ad esempio il motore viene fatto girare molto velocemente appena il guidatore innesta la frizione, permettendo potenzialmente il contatto metallo con metallo dei cuscinetti prima che sia ripristinato il film protettivo di olio. (Questo aspetto non rappresentava un problema quando i motori erano generalmente avviati solo poche volte al giorno, ma con l'impianto start/stop questa condizione può ripresentarsi molte centinaia di volte al giorno.) Il problema si complica con l'uso dei moderni oli meno viscosi che formano un film oleoso più sottile, necessari per migliorare l'efficienza del motore e ridurre ulteriormente le emissioni. Per affrontare questa sfida, Federal-Mogul ha sviluppato un innovativo involucro cuscinetto, rivestito con polimeri in grado di sopportare il funzionamento momentaneo senza lubrificazione che si rivela ideale anche per gli elevati carichi imposti dai motori sovralimentati. Oltre ad aumentare l'assorbimento dell'impatto e la resistenza all'usura, Glyco® IROX® garantisce una buona conducibilità termica per mantenere freddo il cuscinetto e una buona "penetrabilità" per intrappolare le particelle dure impedendo che queste danneggino le superfici di appoggio del cuscinetto.

Lo strato superficiale del cuscinetto Glyco® IROX® favorisce il prolungamento della durata di albero a gomiti e cuscinetti di oltre cinque volte nelle applicazioni più severe e nei cicli di guida come lo start/stop. La grande efficacia di Glyco® IROX® rende possibile l'uso di rivestimenti a base di alluminio al posto del più costoso rame, rendendo questa tecnologia abilitante molto conveniente.

SENZA RIVESTIMENTO IROX® **CON RIVESTIMENTO IROX®**

Le tecnologie di produzione dei cuscinetti di Federal-Mogul permettono ai progettisti dei motori di fare progressi innovativi, in modo da ridurre ulteriormente le emissioni di CO_2 e migliorare i consumi del carburante.

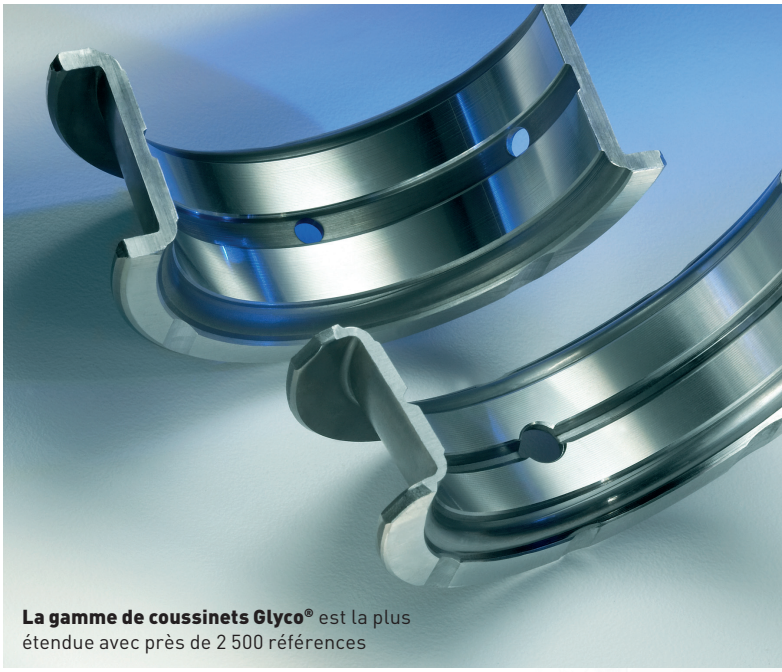
Questi sono esempi perfetti di tecnologie abilitanti che aprono la via del progresso. Essi dimostrano anche perché sia importante sostituire i pezzi con componenti uguali ai componenti OE se si vogliono mantenere le caratteristiche di emissioni, prestazioni e durata. Federal-Mogul è stata una delle prime aziende a sviluppare una nuova gamma di materiali appositamente per queste esigenti applicazioni. Con l'impiego delle tecniche di sinterizzazione, in cui i componenti sono realizzati pressando e scaldando una miscela di polveri di metallo, è possibile calibrare con precisione la composizione e la porosità dei metalli per adeguarsi alle caratteristiche prestazionali richieste al componente. Ne risulta un notevole miglioramento della durata che permette di fare un altro passo verso la riduzione di CO_2 .

La temperatura dei gas di scarico della maggioranza dei motori diesel attualmente in circolazione si aggira sui 500-600°C, ma per migliorare l'efficienza si renderanno necessarie la turboalimentazione a pressioni più alte e più elevate temperature di combustione. A queste temperature eccezionalmente alte l'olio si ossida, il che rappresenta un problema grave per le boccole del turbocompressore dato che queste non devono solamente resistere a questo intenso calore, ma devono anche gestire i carichi imposti dalle elevate velocità di rotazione della turbina.

GLYCO®

GLYCO®

MOINS DE FRICTION, MOINS D'ÉMISSIONS
LES COUSSINETS LES PLUS FIABLES DU MONDE



La gamme de coussinets Glyco® est la plus étendue avec près de 2 500 références

Il n'y a peut-être pas meilleur exemple de solution indirecte que celui des avancées réalisées dans le domaine de la métallurgie. Alors que les concepteurs de moteurs parviennent à réduire les rejets de CO_2 en obtenant plus de puissance avec moins de carburant, les températures montent, les charges augmentent et les matériaux conventionnels sont mis à rude épreuve. La marque Glyco® de Federal-Mogul est leader dans la fourniture de coussinets de moteur d'origine depuis plus de 100 ans et se maintient au premier plan des avancées techniques qui apportent une solution à ces difficultés.

Le nouveau bronze sans plomb compte parmi les nouveaux matériaux introduits par Glyco®, chacun optimisé pour une application spécifique, mais tous partageant l'engagement de Federal-Mogul en faveur de technologies légères et respectueuses de l'environnement. L'absence de plomb dans le bronze élimine les éventuels risques pour la santé liés au plomb dans l'environnement et facilite le recyclage. Elle supprime également la porosité associée au plomb, ce qui contribue à accroître la capacité de charge maximale de 20 %.

En raison de l'allègement des pièces du moteur, la bielle et le bloc moteur subissent une déformation plus importante, ce qui entraîne des charges supplémentaires sur les coussinets.

Les coussinets Glyco® Sputter, utilisés par nombre des plus prestigieux constructeurs automobiles à travers le monde, peuvent supporter ces charges très élevées avec une durabilité deux fois supérieure à celle des coussinets classiques. De plus, une version a été spécifiquement mise au point pour les professionnels de la rectification de moteurs. Le résultat obtenu est un matériau « intelligent » sans plomb, le G-488, qui associe un alliage étain-cuivre à une couche nickel/étain-nickel. La couche d'étain-cuivre reste relativement tendre durant la phase initiale de rodage du moteur lorsqu'elle doit se faire contre un tourillon de vilebrequin existant pour fournir une surface parfaitement adaptée. Avec le temps, la chaleur du moteur diffuse l'étain pour former une couche étain-nickel dure et résistante qui étend la longévité du moteur. Cette haute performance, soigneusement adaptée pour la réparation des moteurs existants, est également plus abordable, car la galvanoplastie qui intervient dans cette technique est moins coûteuse que le revêtement par pulvérisation cathodique.

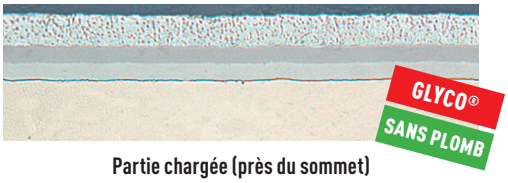
L'introduction d'un système Stop & Start, une option de plus en plus prisée sur les véhicules actuels et vouée à devenir bientôt universelle, permet également de faire des progrès en matière de consommation de carburant et de réduction des émissions.

L'ÉVOLUTION DE LA SURFACE EST ILLUSTRÉE DANS LES DEUX COUPES CI-DESSOUS, OBSERVÉES AU MICROSCOPE.

AVANT

Partie non chargée (à proximité des plans de joint)

APRÈS



Partie chargée (près du sommet)

Évolution du système de couches du matériau G-488 : la diffusion des atomes accroît l'épaisseur de la couche d'alliage étain-nickel

Afin d'éviter tout impact sur le confort de conduite, le moteur démarre très rapidement dès que le conducteur appuie sur l'embrayage, permettant potentiellement un contact métal sur métal des coussinets avant la reformation du film d'huile hydrodynamique protecteur. Cela ne posait pas de problème avec quelques démarrages seulement du moteur dans la journée, mais avec un système Stop & Start, ces conditions peuvent se présenter plusieurs centaines de fois dans une journée. Le problème est accentué par l'utilisation d'huiles modernes moins visqueuses avec un film d'huile plus fin, toutefois nécessaires pour améliorer le rendement du moteur et réduire davantage les émissions. Afin d'apporter une solution à ce problème, Federal-Mogul a mis au point une coquille de coussinet revêtue d'un polymère qui peut supporter momentanément un fonctionnement sans lubrification, et qui est également idéale pour les charges très élevées auxquelles sont soumis les moteurs suralimentés. Outre une plus grande absorption des chocs et une résistance à l'usure accrue, Glyco® IROX® possède de bonnes propriétés de conductivité thermique, pour empêcher le coussinet de chauffer, et présente une bonne incrustabilité, pour emprisonner les particules dures afin qu'elles n'endommagent pas les tourillons du vilebrequin.

Le revêtement du coussinet Glyco® IROX® peut contribuer à multiplier par plus de cinq la durée de vie des vilebrequins et des coquilles de coussinet dans les applications les plus exigeantes et avec des cycles de conduite tels que le Stop & Start. Grâce à la grande efficacité de Glyco® IROX®, il est en outre possible d'utiliser des revêtements à base d'aluminium à la place du cuivre plus onéreux, ce qui contribue à rendre cette technologie habilitante très abordable.

SANS REVÊTEMENT IROX®

AVEC REVÊTEMENT IROX®

TRB
Winner

Les technologies de coussinet de Federal-Mogul permettent aux concepteurs de moteurs de poursuivre sur la voie de l'innovation afin de pouvoir réduire encore davantage les rejets de CO_2 et d'optimiser la consommation de carburant.

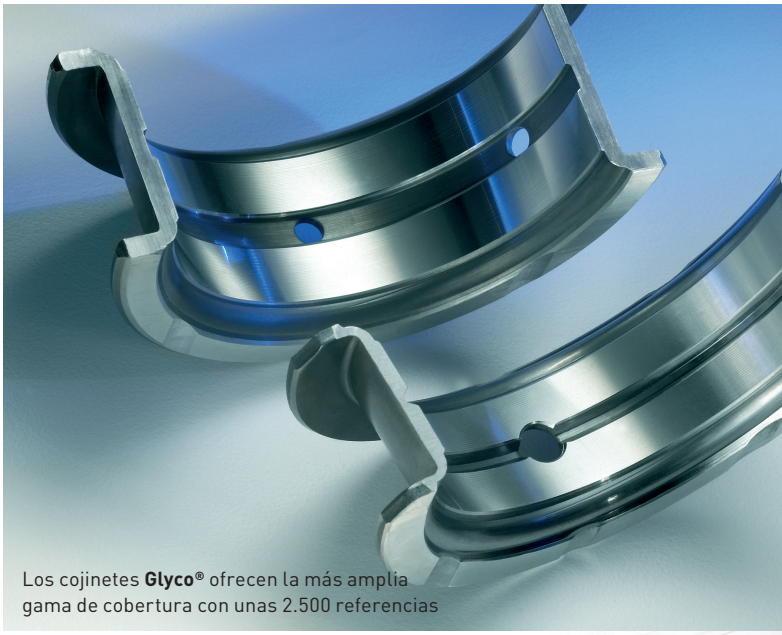
Parfaits exemples de technologies habilitantes, elles éliminent les obstacles au progrès. Elles montrent également l'importance d'un remplacement à l'identique si l'on veut préserver les performances en termes d'émissions et la durabilité. Federal-Mogul est l'une des premières entreprises à développer une nouvelle gamme de matériaux spécifiquement pour cette application très exigeante. L'emploi de techniques de frittage, consistant à fabriquer les composants en compressant et en chauffant un mélange de poudres métalliques, permet d'adapter avec précision la composition et la porosité des métaux en fonction des caractéristiques de performance requises pour le composant. Il en découle une durabilité considérablement améliorée qui va également dans le sens d'une réduction des rejets de CO_2.

La température des gaz d'échappement de la majorité des moteurs Diesel actuellement en service atteindra les 500-600°C, mais l'amélioration du rendement passe par une turbocompression à plus haute pression et des températures de combustion plus élevées. L'huile s'oxyde à ces températures extrêmes, ce qui pose notamment problème aux bagues du turbocompresseur, car elles doivent non seulement supporter cette chaleur intense, mais aussi gérer les charges imposées par les vitesses de rotation très élevées de la turbine.

GLYCO®

GLYCO®

REDUCCION DE LA FRICCION Y MENOS EMISIONES
EL COJINETE MAS FIABLE A NIVEL MUNDIAL



Los cojinetes **Glyco®** ofrecen la más amplia gama de cobertura con unas 2.500 referencias

Tal vez no exista un mejor ejemplo de solución de habilitación que los desarrollos en la metalurgia. A medida que los diseñadores de motores proporcionan una reducción de las emisiones de CO_2 mediante la obtención de más potencia con menos combustible, la temperatura aumenta, se incrementan las cargas y los materiales convencionales sufren La marca Glyco® de Federal-Mogul cuenta con más de 100 años siendo proveedor líder en equipo original de cojinetes de motor y se mantiene a la vanguardia de los avances técnicos que responden a estos retos.

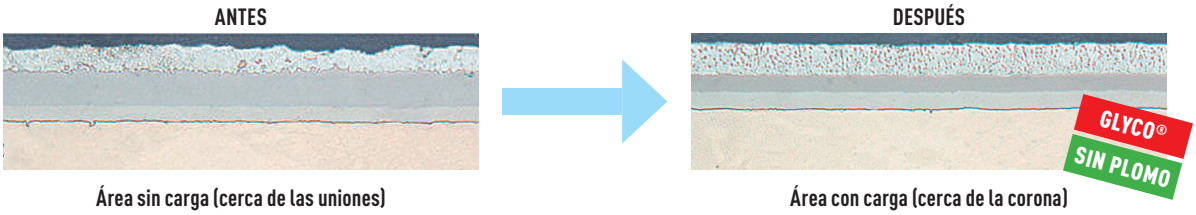
La nueva gama de bronce sin plomo es una de las diferentes variedades de nuevos materiales introducidos por Glyco®, cada uno de ellos optimizado para una aplicación específica, aunque todos comparten el compromiso de Federal-Mogul de incorporar tecnologías ligeras y respetuosas con el medio ambiente. El bronce sin plomo elimina los posibles riesgos de salud asociados con el plomo en el medio ambiente y simplifica el reciclaje. Asimismo, elimina la porosidad asociada con el plomo, lo que contribuye a aumentar la capacidad de carga máxima hasta en un 20 %.

Los componentes ligeros del motor se traducen en una mayor deformación de las bielas y el bloque motor y esto, a su vez, pone más carga en los cojinetes.

Los cojinetes Glyco® Sputter, utilizados por muchos de los principales fabricantes de vehículos de mayor prestigio del mundo, pueden soportar estas cargas elevadísimas y proporcionan dos veces más durabilidad que los cojinetes convencionales. Asimismo, se ha desarrollado una versión especialmente para los rectificadores de motores. El resultado es el material «inteligente» G-488 sin plomo, que combina una aleación de estaño-cobre con una capa de níquel y estaño-níquel. La capa de estaño-cobre es relativamente blanda durante la fase de rodaje inicial del motor, momento en el que tiene que ajustarse frente a una muñequilla del cigüeñal existente para proporcionar una superficie perfectamente compatible. Con el tiempo, el calor del motor se difunde por el estaño para formar una capa dura y resistente de estaño-níquel que confiere al motor una mayor vida útil. Este alto rendimiento, diseñado a medida para la reparación de motores existentes, también es más asequible porque la técnica utiliza la galvanización en lugar de un costoso revestimiento de pulverización catódica.

Se puede dar otro gran paso en cuanto al ahorro de combustible y la reducción de emisiones introduciendo un sistema start-stop, un accesorio que va ganando presencia en los vehículos de hoy en día que pronto podría convertirse en universal.

ESTAS SECCIONES, VISTAS CON UN MICROSCOPIO, MUESTRAN CÓMO VA CAMBIANDO LA SUPERFICIE.



Área sin carga (cerca de las uniones)

Área con carga (cerca de la corona)

Cambio del sistema de capas de G-488 – La difusión de los átomos aumenta el grosor de la capa de estaño-níquel

Para evitar que la facilidad de conducción se vea perjudicada, el motor se arranca muy rápidamente cuando el conductor engrana el embrague, lo que permite el contacto de metal con metal de los cojinetes antes de que se restablezca la capa de aceite hidrodinámico de protección. Esto no suponía ningún problema cuando los motores se arrancaban sólo un par de veces al día, pero con un sistema start-stop estas condiciones pueden ocurrir cientos de veces al día. El problema se ve agravado por el uso de aceites modernos, que son menos viscosos, forman una capa de aceite más fina, y son necesarios para mejorar la eficacia del motor y reducir las emisiones todavía más. Para resolver este problema, Federal-Mogul ha desarrollado un innovador casquillo revestido de polímero que puede soportar el funcionamiento momentáneo sin lubricación, y que también es idóneo para las cargas muy altas impuestas por los motores de sobrealimentación. Además de una mayor absorción de impactos y una resistencia al desgaste incrementada, Glyco® IROX® ofrece una buena conductividad térmica para mantener fresco el cojinete y una buena facultad de absorción para atrapar las partículas duras con el fin de que no dañen las muñequillas de los cojinetes.

La superposición de cojinetes Glyco® IROX® puede ayudar a multiplicar por más de cinco la vida de los cigüeñales y los casquillos en las aplicaciones más exigentes y en ciclos de conducción como el start-stop. Glyco® IROX® es tan eficaz que es posible utilizar revestimientos basados en aluminio en lugar de cobre, que es más caro, lo que contribuye a que esta tecnología de habilitación sea muy asequible.

SIN REVESTIMIENTO IROX®

A partir de una superposición blanda (foto izquierda), el proceso de difusión en el centro de carga superior del casquillo crea una capa de estaño-níquel extremadamente duradera y resistente al desgaste, lo que proporciona una vida útil más amplia.

2011 Automotive News PACE AWARD
Ernst & Young TRC
Winner

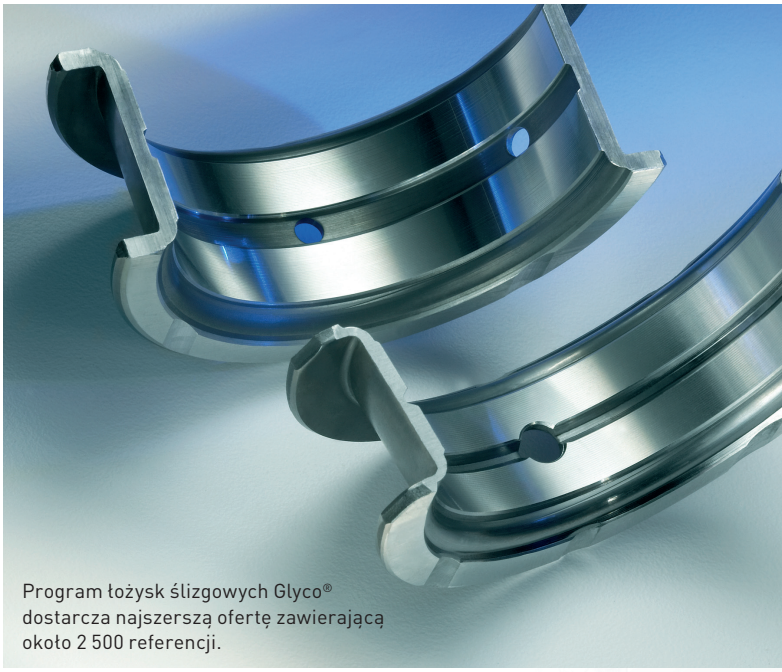
Las tecnologías de cojinetes de Federal-Mogul permiten que los diseñadores de motores sigan innovando de manera que las emisiones de CO_2 puedan reducirse todavía más y se mejore el consumo de combustible.

Se trata de unos ejemplos perfectos de tecnologías de habilitación, puesto que eliminan los obstáculos para el progreso. También demuestran por qué es tan importante realizar reparaciones utilizando componentes similares si se desean mantener el rendimiento de las emisiones y la durabilidad. Federal-Mogul es una de las primeras empresas en desarrollar de forma específica una nueva gama de materiales para esta aplicación tan exigente. Mediante técnicas de sinterización, en las que los componentes se fabrican comprimiendo y calentando una mezcla de polvos metálicos, se consigue que la composición y la porosidad de los metales se adapten con precisión a las características de rendimiento exigidas en el componente. El resultado es una durabilidad mejorada considerablemente que permite dar un nuevo paso en la reducción de las emisiones de CO_2.

La mayoría de los motores diésel en servicio en la actualidad tendrán temperaturas de gases de escape en torno a los 500-600 °C, pero elevar la eficacia significa una mayor presión de sobrealimentación y temperaturas de combustión superiores. El aceite se oxida a estas temperaturas extremadamente altas, lo que supone un problema específico para los casquillos del turbocompresor, ya que no sólo deben soportar el calor intenso, sino que también deben gestionar las cargas impuestas por las altísimas velocidades de giro de la turbina.

GLYCO®

MNIEJSZE TARCIE, MNIEJ ZANIECZYSZCZEŃ
NAJBARDZIEJ WIARYGODNE ŁOŻYSKA ŚLIZGOWE ŚWIATA



Program łożysk ślizgowych Glyco® dostarcza najszerszą ofertę zawierającą około 2 500 referencji.

Być może nie ma lepszego przykładu Rozwiązania Umożliwiającego jak rozwój w metalurgii. Ponieważ konstruktorzy silników zapewniają redukcję emisji CO_2 poprzez uzyskiwanie więcej mocy z coraz mniejszych ilości paliwa musimy liczyć się ze wzrostem temperatur, zwiększaniem obciążeń i przeciążaniem konwencjonalnych materiałów. Marka Glyco®, należąca do Federal-Mogul jest wiodącym dostawcą łożysk ślizgowych na montaż fabryczny od ponad 100 lat i pozostaje w czołówce technicznego rozwoju, uczestnicząc w rozwiązywaniu pojawiających się wyzwań.

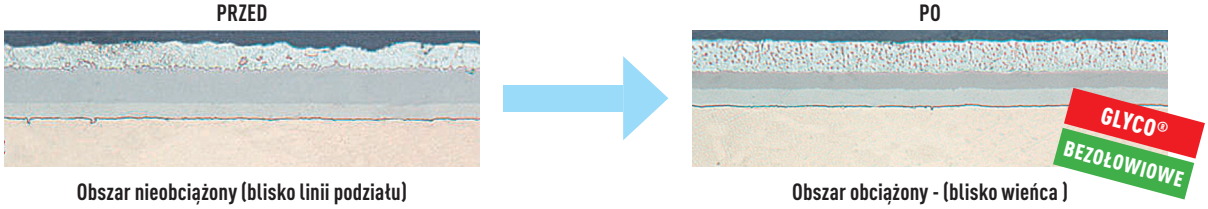
Nowy, nie zawierający ołowiu, rodzaj brązu należy do jednego z kilku programów zawierających nowe, wprowadzone przez Glyco® materiały. Każdy z nich jest dostosowany do konkretnego zastosowania, ale jednocześnie każdy z nich spełnia założenia Federal-Mogul dotyczące niskiej wagi i stosowania technologii przyjaznych środowisku. Brązy nie zawierające ołowiu eliminują potencjalne zagrożenia dla zdrowia, wynikające z obecności ołowiu w środowisku, a jednocześnie znacznie ułatwiają recykling. Dzięki zmniejszeniu porowatości, która związana jest z ołowiem, zdolność do przenoszenia maksymalnych obciążeń wzrosła o 20%.

Zmniejszenie wagi części silnikowych skutkuje większymi odkształceniami korbowodów i bloku silnika, co z kolei prowadzi do zwiększenia obciążeń łożysk ślizgowych.

Sputterowe panewki Glyco®, stosowane przez wielu najbardziej prestiżowych producentów pojazdów na świecie, mogą przenosić te duże obciążenia, zapewniając jednocześnie dwukrotnie większą trwałość w porównaniu z konwencjonalnymi panewkami i wersjami panewek opracowanymi na potrzeby remontów silników. Wynikiem jest „inteligentny" bezołowiowy materiał G-488, który łączy stop cyna-miedź z warstwą nikiel/cyna-nikiel. Warstwa cyna-miedź jest stosunkowo miękka w trakcie początkowego okresu docierania silnika, kiedy to musi ułożyć się względem istniejącego czopu wału korbowego, dla uzyskania dokładnego dopasowania powierzchni. Z czasem, ciepło powstające w silniku doprowadza do dyfuzji cyny i powstania twardej i trwałej warstwy cyna-nikiel, która zapewnia większą trwałość silnikowi. Ten o wysokich parametrach i doskonale dostosowany do napraw silników materiał jest również bardziej korzystny cenowo, dlatego materiały galwaniczne są częściej stosowane niż drogie materiały z powłokami sputterowymi.

Dalszy postęp w zmniejszeniu zużycia paliwa i redukcji emisji zanieczyszczeń może być osiągnięty przez wprowadzanie systemu start-stop. Systemu, który coraz częściej znajduje zastosowanie we współcześnie produkowanych samochodach.

TE OBRAZY, WIDZIANE POD MIKROSKOPEM, POKAZUJĄ JAK ZMIENIAJĄ SIĘ POWIERZCHNIE



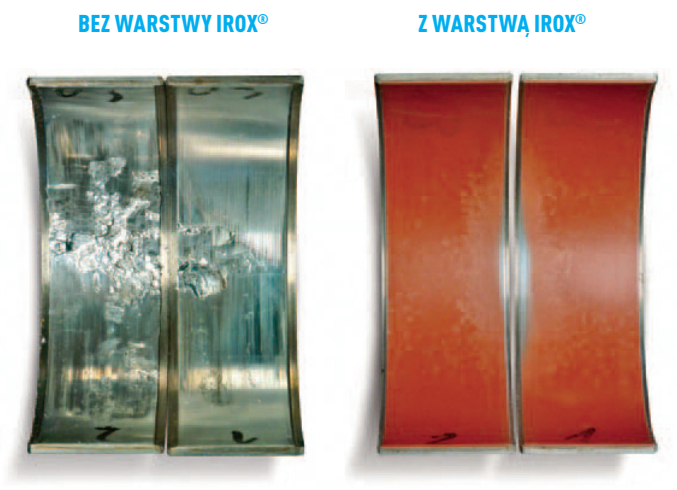
Obszar nieobciążony (blisko linii podziału)

Obszar obciążony - (blisko wieńca)

Zmiana warstw w materiale G-488. Dyfuzja atomów zwiększa grubość warstwy cyna-nikiel

Nagłe obciążenie silnika (np. podczas uruchamiania) może prowadzić do wystąpienia kontaktu „metal o metal" w łożyskach ślizgowych, do czasu zanim zostanie odtworzona warstwa zabezpieczającego, hydrodynamicznego filmu olejowego. Nie było to problemem kiedy silniki były uruchamiane kilka razy dziennie, ale w przypadku systemu start-stop ta sytuacja może powtarzać się kilkaset razy w ciągu dnia. Problem jest zwiększony przez stosowanie nowoczesnych olei, o mniejszej lepkości, tworzących cieńszy film olejowy w celu zwiększenia efektywności pracy silnika i zmniejszenia emisji zanieczyszczeń. Aby rozwiązać ten problem Federal-Mogul opracował innowacyjne łożysko ślizgowe z powłoką polimerową. To rozwiązanie jest zdolne do chwilowej pracy bez smarowania i jednocześnie doskonale funkcjonuje pod bardzo dużymi obciążeniami w wysoko doładowanych silnikach. Oprócz zwiększonej zdolności do przenoszenia chwilowych udarów i zwiększonej odporności na zużycie, Glyco® IROX® zapewnia wysoką przewodność cieplną, co ułatwia utrzymanie właściwej pracy łożyska oraz zdolność wchłaniania twardych zanieczyszczeń, co z kolei wpływa na ochronę czopów wału.

Warstwa Glyco® IROX® pomaga w zwiększeniu trwałości wału korbowego i samego łożyska ponad pięciokrotnie, w przypadku najbardziej wymagających zastosowań oraz w przypadku stosowania systemu start-stop. Rozwiązanie Glyco® IROX® jest tak skuteczne, że jest możliwe stosowanie warstw bazowych łożyska wykonanych z aluminium zamiast z droższej miedzi, czyniąc tę Umożliwiającą Technologię wyjątkowo korzystną cenowo.



Panewki na podłożu ze stopu A-650 Al po teście trwałości przy obciążeniu 80 MPa w czasie 250 godzin

Obraz po lewej stronie pokazuje „inteligentne" zachowanie G-488. Na początku warstwa jest miękka (lewy obraz), proces dyfuzji w bardziej obciążonej, centralnej części panewki prowadzi do powstania bardzo trwałej i odpornej na zużycie warstwy cynowo-niklowej, która znacznie wydłuża trwałość łożyska ślizgowego.

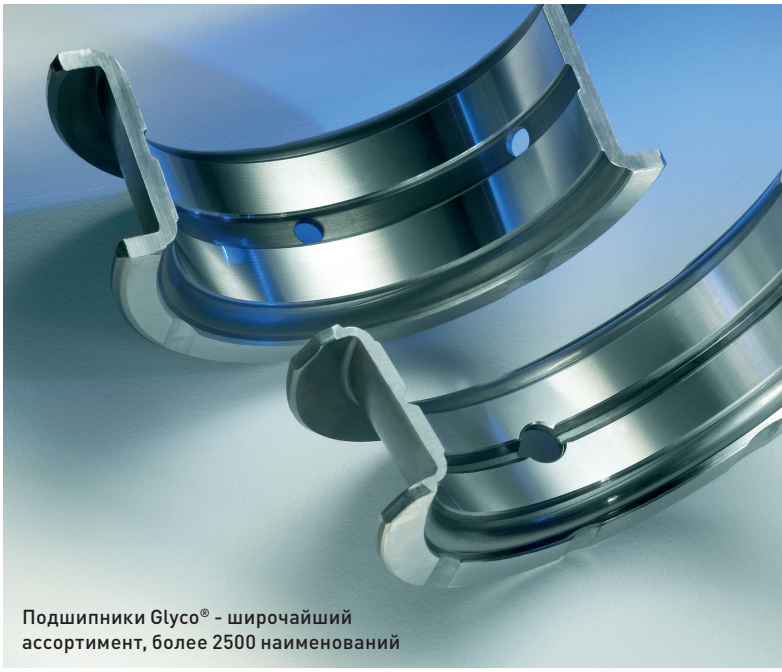
2011 Automotive News PACE AWARD
Ernst & Young TRL
Winner

Technologie produkcji łożysk ślizgowych, opracowane przez Federal-Mogul, umożliwiają konstruktorom silników kolejne innowacje służące dalszej redukcji emisji CO_2 i zmniejszeniu zużycia paliwa.

Jednym z zadań Technologii Umożliwiających jest usuwanie barier stojących na drodze rozwoju. Pokazują one również jak ważna jest możliwość wymiany niektórych rozwiązań jeśli poziom redukcji emisji i trwałość mają być utrzymane. Federal-Mogul jest jedną z pierwszych firm, które opracowują nowe typy materiałów, koniecznych do spełnienia najbardziej ostrych wymagań. Technologia spiekania, gdzie komponenty składające się ze sproszkowanych metali powstają pod wpływem działania ciśnienia i obróbki cieplnej, umożliwia dokładne dobranie składu i porowatości metalu do oczekiwanych od danego komponentu właściwości. W wyniku tego zwiększona trwałość komponentów umożliwia dalszy krok na drodze redukcji emisji CO_2.

Temperatura gazów wylotowych w przypadku większości, spośród obecnie używanych, silników diesla wynosi około 500-600°C. Zwiększanie efektywności pracy silnika oznacza wyższe ciśnienia turbodoładowania i wyższe temperatury spalania. W tych bardzo wysokich temperaturach olej ulega utlenianiu, co szczególnie jest groźne dla tulei turbosprężarek, które nie tylko muszą znosić wysokie temperatury ale także przenosić obciążenia wynikające z bardzo dużych prędkości obrotowych turbiny.

GLYCO®



Подшипники Glyco® - широчайший ассортимент, более 2500 наименований

МЕНЬШЕ ТРЕНИЕ - МЕНЬШЕ ВЫБРОСЫ
САМЫЕ ПОПУЛЯРНЫЕ ПОДШИПНИКИ СКОЛЬЖЕНИЯ В МИРЕ

Наилучший пример косвенного решения - это новинки в области металлургии. Конструкторы двигателей уменьшают выбросы CO_2, получая больше мощности из меньшего количества сжигаемого топлива. Рабочие температуры и нагрузки при этом возрастают, и обычные материалы с возросшими требованиями уже не справляются. Торговая марка Glyco® корпорации Federal-Mogul уже на протяжении свыше 100 лет является ведущей в поставках вкладышей двигателя оригинального качества и по-прежнему остается в авангарде технических инноваций, решая сложные задачи.

Бронза без содержания свинца - один из новых материалов, созданных Glyco®. Каждый из них создавался для определенного применения, но все они отвечают обязательствам Federal-Mogul по снижению веса и ответственному отношению к окружающей среде. Бронза без содержания свинца исключает возможные угрозы здоровью, которые могут возникать вследствие наличия свинца в окружающей среде, а также облегчает переработку данного материала. Также устраняется пористость структуры, связанная с использованием свинца, и благодаря этому максимальная несущая способность способна увеличиваться до 20%.

Результатом уменьшения веса деталей двигателя явилось увеличение деформации шатунов и блока двигателя, что, в свою очередь, вызвало еще большее повышение нагрузки на вкладыши.

Вкладыши Glyco® Sputter используют самые знаменитые мировые автопроизводители. Эти подшипники могут выдерживать очень высокие нагрузки, они в два раза более прочные, чем стандартные подшипники скольжения. Данная марка разработана специально для специалистов по модернизации двигателей. Результатом стал «умный» материал без свинца, G-488, в котором олово-медный сплав сочетается со слоем никеля / олово-никеля. Слой олово-медного сплава еще остается относительно мягким в начале приработки поверхностей вкалдыша и шейки коленчатого вала двигателя, обеспечивая в итоге идеально сопряженные поверхности контакта . Со временем высокие температуры двигателя рассеивают олово, в результате чего образуется прочный и долговечный слой олово-никеля, продлевающий срок службы двигателя. Эта технология, тщательно разработанная для ремонта существующих двигателей, вполне доступна по цене, так как в ней применяется электролитическое покрытие, а не дорогостоящее покрытие напылением.

НА ЭТИХ ИЗОБРАЖЕНИЯХ, ПОЛУЧЕННЫХ ПОД МИКРОСКОПОМ, ПОКАЗАНО, КАК МЕНЯЕТСЯ ПОВЕРХНОСТЬ.

ДО

Область без нагрузки (вблизи линий разъема)

ПОСЛЕ

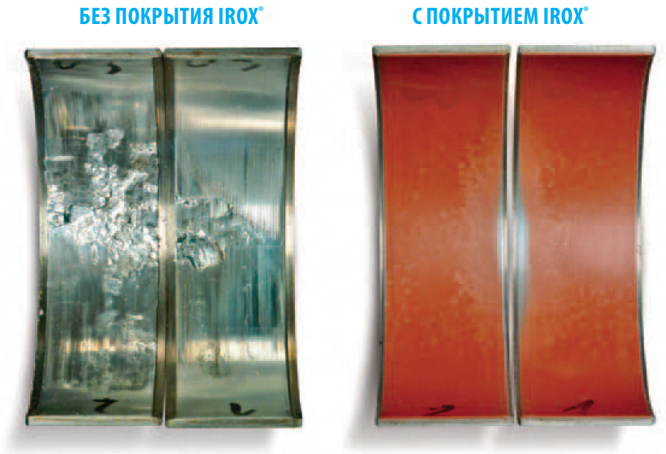
Область под нагрузкой (по центру вкладыша)

Изменение слоя G-488 - диффузия атомов увеличивает толщину олово-никелевого слоя

Еще один значительный шаг к экономии топлива и снижению вредных выбросов - новая система «старт-стоп». Она все чаще устанавливается в автомобилях и вскоре может стать универсальной.

Во избежание изменений управляемости автомобиля двигатель заводится очень быстро, как только водитель нажимает на сцепление, и есть вероятность работы подшипников скольжения всухую, поскольку защитная пленка из масла еще не успела образоваться. Это не являлось бы проблемой, если бы двигатель заводили только несколько раз в день, но с внедрением системы «старт-стоп» двигатель может запускаться несколько сотен раз в день. Задача осложняется использованием современных, менее вязких масел, образующих более тонкую пленку, что обусловлено необходимостью увеличения эффективности работы двигателя и уменьшения вредных выбросов. Для решения этой задачи корпорация Federal-Mogul создала новый корпус вкладыша с полимерным покрытием, способный кратковременно работать без смазки и прекрасно выдерживающий высокие нагрузки в высокофорсированных двигателях. Наряду с увеличенным поглощением энергии удара и износостойкостью Glyco® IROX® обеспечивает хорошую теплопроводность, чтобы подшипник охлаждался, и хорошую способность к внедрению инородных твердых частиц, которые подшипник ловит и удерживает, чтобы они не повредили опорную шейку.

Покрытие Glyco® IROX® поможет продлить срок службы коленчатого вала и корпуса подшипника более чем в пять раз даже в самых сложных условиях и при наличии циклов старт-стоп. Покрытие Glyco® IROX® настолько эффективно, что возможно использование алюминиевых подложек вместо более дорогостоящих медных, и потому эта технология в высшей степени рентабельна.



Корпус подшипника с подложкой из сплава A-650 Al после тестирования на стенде в течение 250 ч при 80 МПа

На рисунке слева показано «умное» поведение G-488. Начиная с мягкого слоя (рисунок слева), процесс диффузии в подверженном большим нагрузкам центре корпуса подшипника создает в высшей степени долговечный и износоустойчивый слой олово-никеля, продлевающий срок службы подшипника.

2011 Automotive News PACE AWARD
Ernst & Young
TRB
Winner

Благодаря подшипникам Federal-Mogul конструкторы двигателей могут продолжать внедрять инновационные решения для дальнейшего снижения выбросов CO_2 и расхода топлива.

Они сметают препятствия на пути прогресса - прекрасный пример косвенного решения. Также становится очевидно, почему столь важно заменять подобное подобным, если необходимо сохранить характеристики двигателя - эффективность, долговечность и уровень выбросов. Корпорация Federal-Mogul одной из первых создала новую линейку материалов специально для решения этой непростой задачи. Использовалась техника агломерации, согласно которой детали изготавливаются путем сжатия и нагревания смеси металлических порошков. Благодаря этому состав и пористость металла можно точно подобрать для получения необходимых характеристик детали. Результатом стала постоянно увеличивающаяся износоустойчивость, позволяющая сделать следующий шаг в уменьшении выбросов CO_2.

На сегодняшний день температура выхлопных газов большинства двигателей достигает 500-600°C, но увеличение мощности двигателя означает более высокое давление турбонаддува и более высокие температуры при сжигании топлива. При таких высоких температурах масло окисляется и это негативно влияет на втулки турбонагнетателя - они должны не только выдерживать высокие температуры, но и нагрузки, возникающие при огромных скоростях вращения турбины.

GLYCO®

توفر محامل Glyco® تشكيلة كبيرة من قطع الغيار التي تقدر بحوالي 2500 صنف.

GLYCO®

احتكاك أقل وانبعاثات لا تُذكر
المحامل الأكثر جودة في العالم

تتميز محامل Sputter Bearings من Glyco® -التي يستخدمها أشهر مصنعي المركبات على مستوى العالم- بقدرة هائلة على مقاومة الأحمال الفائقة وذلك لقدرتها المضاعفة على التحمل مقارنة بالمحامل التقليدية، بل إنه قد تم تصميم نوع من هذا المحامل خصيصًا لمهندسي المحركات. وكانت النتيجة هي تلك المادة الذكية الخالية من الرصاص G-488 والتي يدخل في تركيبها سبيكة النحاس والقصدير وطبقة من النيكل أو من النيكل والقصدير، ولا تزال هذه الطبقة من النيكل والقصدير لينة نسبيًا أثناء مرحلة التشغيل الأولية للمحرك عندما يستلزم الأمر ارتكازها في مقابل عمود الكرنك بحيث يتم توفير سطح متوافق تمامًا ، وبمرور الوقت تعمل سخونة المحرك على انصهار مادة القصدير لتكوين طبقة صلبة متينة من النيكل والقصدير تعمل على إطالة عمر المحرك. فهذا الأداء المخصص لإصلاح المحركات الموجودة حاليًا هو أيضًا سهل التطبيق وذلك لأن هذه التقنية تستخدم الطلاء بالكهرباء بدلاً من الطلاء باهظ الثمن الذي يعتمد على طريقة الرش.

لتفادي أي حدث قد يؤثر على سلاسة القيادة، يتم تشغيل محرك السيارة بسرعة كبيرة وذلك بمجرد جذب السائق للقابض، حيث يتم ملامسة المعدن بمعدن المحامل قبل تجديد غشاء الزيت الهيدروديناميكي

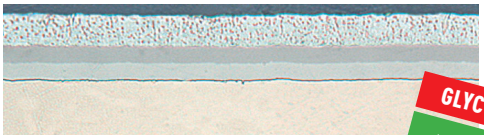
قد تكون التطورات التي يشهدها مجال علم الفلزات هي النموذج الأفضل للحلول التمكينية. ونظرًا لأن الشغل الشاغل لمصممي المحركات هو تقليل معدلات انبعاثات ثاني أكسيد الكربون عن طريق استخلاص أكبر قدر من الطاقة من أقل كمية من الوقود، ينتج عن ذلك ارتفاع درجات الحرارة وزيادة الأحمال والاحتكاك التقليدي للمعادن. وقد احتلت ماركة محامل Glyco® من Federal-Mogul الريادة بين موردي المعدات الأصلية لمحامل المحركات لأكثر من مائة عام بل إنها استطاعت أيضًا أن تبقى في طليعة مطوري التقنيات التي يمكنها مواجهة هذه التحديات.

ويعد البرونز الخالي من الرصاص أحد الابتكارات الجديدة من Glyco® حيث يتم إعداد كل مادة من هذه المواد لتطبيق معين ولكن جميعها تتميز بنفس التزامات Federal-Mogul من ناحية تخفيف الوزن والتقنيات المحافظة على البيئة. ويعمل البرونز الخالي من الرصاص على الحد من المخاطر الصحية المحتملة والناجمة عن التعرض للرصاص في البيئة وتسهيل عملية إعادة التدوير، كما أنها تزيد من خاصية المسامية التي يتميز بها الرصاص والتي تسهم في زيادة الحد الأقصى لقدرة الحمل بنسبة 20 بالمائة.

علمًا بأن أجزاء المحرك خفيفة الوزن ينتج عنها تشوه قضيب التوصيل ومجموعة المحرك بدرجة أكبر، وهذا بدوره يضع مزيدًا من العبء على المحامل.

تم التقاط صور لهذه القطاعات باستخدام ميكروسكوب، والتي تبين مدى التغير الذي لحق بالسطح.

بعد



المنطقة المحملة (بالقرب من القمة)

قبل

المنطقة المفرغة (بالقرب من الخطوط الفاصلة)

تغير نظام طبقة G-488 - زيادة كثافة طبقة النيكل-القصدير نتيجة زيادة تطاير الذرات.

تعمل شركة Federal-Mogul لتقنيات المحامل على توفير الإمكانيات لمصممي المحركات من أجل مواصلة الابتكار للوصول لتقنية تحد من انبعاثات غاز ثاني أكسيد الكربون وتحسن من عملية استهلاك الوقود.

ومن بين الأمثلة الواضحة على هذه التقنيات المتطورة؛ قيام الشركة بالتخلص من عوائق التقدم، فضلاً عن توضيح أهمية استبدال المثل بالمثل، إذا لزم الأمر للمحافظة على نسب الانبعاثات والمتانة. تعد شركة Federal-Mogul من أولى الشركات التي طورت مجموعة جديدة من المواد وخاصة ما يتعلق بحالات الاستخدام المتكررة كثيرًا. يتم تشكيل معادن مسامية بحيث تكون مصممة بدقة تتناسب مع خصائص الأداء المطلوبة للمكون وذلك باستخدام تقنيات التلبد التي تعتمد في تصنيع المكونات على ضغط وتسخين مزيج من مساحيق المعادن. وينتج عن ذلك تحسن جوهري للمتانة والتي تُمكن من اتخاذ خطوات أخرى لتقليل انبعاث غاز ثاني أكسيد الكربون.

ينتج عن غالبية محركات الديزل الموجودة الآن درجات حرارة لعادم الغاز تُقدر بحوالي 500-600 درجة مئوية، ولكن المقصود برفع الكفاءة ارتفاع ضغط الشحن التوربيني وارتفاع درجة حرارة الاحتراق. تتسبب أكسدة الزيت في ظل درجات حرارة مرتفعة مشابهة إلى وقوع مشاكل كبيرة في البطانات المعدنية للشاحن التوربيني حيث أنها لا تتحمل مثل هذه الحرارة الشديدة، كما يلزم أن تتعامل مع الأحمال التي تفرضها سرعة دوران التوربينات العالية جدًا.

الواقي، وليس هناك أي مشكلة عند بدء تشغيل المحرك مرات قليلة في اليوم بطريقة صحيحة، ولكن مع نظام بدء تشغيل - إيقاف تشغيل المحرك قد تحدث هذه الحالات مئات المرات يوميًا. وتكمن المشكلة في استخدام زيوت حديثة أقل لزوجة مع وجود طبقة رقيقة من الزيت أقل سمكًا وهي ضرورية لتحسين كفاءة المحرك والحد من الانبعاثات. ولمواجهة هذه المشكلة، قامت شركة Federal-Mogul بابتكار سبيكة محامل مطلية بالبوليمر للتصدي لمشكلة التشغيل المؤقت دون تزييت، والتي تعد مثالية بالنسبة للأحمال الثقيلة على المحركات شديدة الدفع، فضلاً عن قدرتها الكبيرة على امتصاص الصدمات ومقاومة التآكل، كما توفر منتجات Glyco® IROX® توصيل حراري جيد للإبقاء على المحامل باردة وإمكانية ثبات عالية لاحتجاز أي جسيمات صلبة حتى لا تتلف مقاعد ارتكاز المحامل.

يعمل طلاء محامل Glyco® IROX® على زيادة عمر أعمدة الكرنك وسبائك المحامل خمسة أضعاف الأعمدة العادية في حالات الاستخدام المتكررة للفرامل وعجلات القيادة كما هو الحال عند بدء تشغيل - إيقاف تشغيل المحرك. كما أن طلاء محامل Glyco® IROX® أكثر فعالية حيث يعتمد على التبطين بمادة الألومونيوم بدلاً من النحاس باهظ التكلفة، مما يجعل هذه التقنية المتطورة ميسورة التكلفة.

تعرض الصور الموجودة على الجانب الأيسر الأداء الذكي لنظام G-488 الناتج عن الطلاء الناعم (الصورة اليسرى)، وما ينتج عن عملية توزيع الأحمال المرتفعة على مركز المحامل من زيادة التحمل ومقاومة التآكل فضلاً عن طبقة النيكل-القصدير التي تزيد من عمر المحامل.

GLYCO®

GLYCO G-488® LEAD-FREE TECHNOLOGY

GLYCO G-488® LEAD-FREE TECHNOLOGY

G-488 is the first "intelligent" lead-free bearing material developed by Federal-Mogul capable of resisting very high loads. A bronze and a nickel-tin-nickel intermediate layer, together with a tin-copper sliding layer are applied to a steel spine. Under thermal load diffusion processes occur between the sliding and the intermediate layer, resulting in an increased durability. Thus G-488 is soft and adaptable during the running-in phase, but hard and fatigue resistant throughout the rest of its lifetime.

GLYCO G-488® BLEIFREIE TECHNOLOGIE

G-488 ist das erste „intelligente" Gleitlagermaterial für hoch belastete Lager, entwickelt von Federal-Mogul. Eine Bronze und eine Nickel-Zinn-Nickel-Zwischenschicht werden zusammen mit einer Zinn-Kupfer-Gleitschicht auf einen Stahlträger aufgebracht. Bei thermischer Belastung finden zwischen Gleit- und Zwischenschicht Diffusionsprozesse statt, die zu einer Erhöhung der Widerstandfähigkeit führen. Am Anfang ist daher G-488 weich und anpassungsfähig, im Laufverhalten während der restlichen Betriebszeit hoch belastbar und verschleissfest.

GLYCO G-488® TECNOLOGIA SENZA PIOMBO

G-488 è il primo materiale per cuscinetti "intelligente" sviluppato da Federal-Mogul e capace di resistere a carichi di lavoro molto alti. Uno strato di bronzo e uno strato intermedio di nickel-stagno-nickel, assieme ad un ulteriore spessore superficiale di stagno-rame, sono applicati ad un supporto di acciao. Per effetto delle pressioni e temperature d'esercizio del motore, si hanno processi di diffusione tra la superficie di scorrimento e gli strati più interni che aumentano cosí la durata ed il ciclo di vita del cuscinetto. In conseguenza G-488 é morbido e adattabile durante la fase di rodaggio, ma duro e resistente alla fatica per il rimanente tempo della sua vita.

TECHNOLOGIE SANS PLOMB GLYCO G-488®

G-488 est le premier matériau "intelligent" pour coussinets. Développé par Federal-Mogul, ce matériau offre une résistance exceptionnelle pour des contraintes sévères. Cela est rendu possible par l'association de plusieurs couches sur une armature d'acier: une couche de bronze et une feuille intermédiaire nickel-étain-nickel combiné à un revêtement étain-cuivre. Lors de contraintes thermiques, la diffusion d'atomes entre la feuille intermédiaire et le revêtement provoque le durcissement du matériau. G-488 est un matériau tendre pendant une période de rodage, mais dur et résistant par la suite.

TECNOLOGÍA SIN PLOMO DE GLYCO G-488®

El material G-488 desarrollado por Federal-Mogul es el primer material "inteligente" para cojinetes que además es capaz de soportar cargas de motor muy elevadas. Una capa de bronce y una capa intermedia de níquel-estaño-níquel son aplicadas entre la superficie de deslizamiento de estaño-cobre y el soporte de acero. Bajo carga térmica se producen procesos de difusión entre la superficie de deslizamiento y la capa intermedia, cuyo resultado es una mayor durabilidad. Así el material G-488 es blando y adaptable durante el periodo de rodamiento, pero duro y resistente a la fatiga durante el resto de su vida útil.

GLYCO G-488 TECHNOLOGIA BEZOŁOWIOWA

G-488 jest pierwszy "inteligentnym" łożyskowym materiałem bezołowiowym opracowanym przez Federal-Mogul, który jest zdolny do przenoszenia bardzo dużych obciążeń. Na stalową warstwę nośną nakładana jest warstwa pośrednia wykonana z brązu i warstwa nikiel-cyna-nikiel, a następnie warstwa ślizgowa cyna-miedź. W wyniku obciążeń cieplnych zachodzi proces dyfuzji pomiędzy warstwą ślizgową i warstwą pośrednią, powodując zwiększenie trwałości łożyska. Dzięki temu rozwiązaniu materiał G-488 jest miękki i łatwo dostosowuje się w trakcie okresu docierania, natomiast w pozostałym okresie pracy jest twardy i ma wysoką wytrzymałość zmęczeniową.

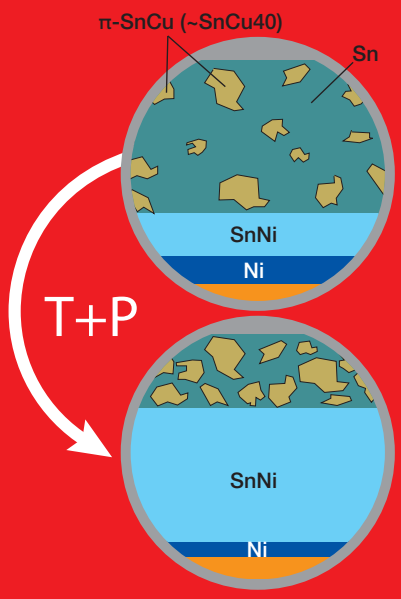
GLYCO G-488® LEAD-FREE TECHNOLOGY

БЕССВИНЦОВАЯ ТЕХНОЛОГИЯ GLYCO G-488®

G-488 - первый «умный» антифрикционный материал, разработанный компанией Federal-Mogul, который способен выдерживать очень высокие нагрузки. На стальную основу наносится слой из олова и никеля. В результате температурного воздействия структура материалов изменяется, а диффузия атомов способствует утолщению слоя, содержащего олово и никель. Благодаря вкраплениям меди, слой из олова и никеля становится более износостойким и прочным, что делает его пластичным во время периода приработки и твердым в течение всего остального срока службы.

تقنية GLYCO G-488® الخالية من الرصاص

تعد G-488 أول مادة "ذكية" خالية من الرصاص تم تطويرها على يد شركة Federal-Mogul وهي مادة قادرة على مقاومة الحمولات العالية جدًا. تم وضع طبقة وسيطة من البرونز والنيكل معًا إلى جانب طبقة منزلقة من النحاس والقصدير على ظهر صلب. تؤدي عمليات الانتشار تحت الضغط الحراري التي تحدث بين الطبقة المنزلقة والطبقة المتوسطة إلى زيادة درجة المتانة. تعد G-488 مادة ناعمة وقابلة للتكيف أثناء مرحلة التشغيل، بيد أنها صلبة ومقاومة للإهلاك على مدار باقي فترة العمر.



SOFT Sn-MATRIX WITH HARD EMBEDDINGS. UNDER THERMAL LOAD, THE THICKNESS OF THE SnNi-LAYER INCREASES THROUGH TRANSFORMATION OF THE Ni- AND THE Sn-LAYER.

THE LOAD-CARRYING CAPABILITY INCREASES AS THE HEAD PARTICLES CONCENTRATE UNDERNEATH THE SURFACE. AT THE SAME TIME, THE THICKNESS OF THE SLIDING LAYER DECREASES.

GLYCO G-488® PROCESS OF CHANGING

GLYCO LEAD-FREE SPUTTER TECHNOLOGY

GLYCO LEAD-FREE SPUTTER TECHNOLOGY

A material process developed by Federal-Mogul/Glyco has produced the most durable known bearing material, suited for the high load demands of diesel and gasoline engine crankshafts. By bombarding a source target of aluminium-tin alloy with high-energy argon plasma, aluminium and tin atoms are freed from the target and deposited as the running surface on specially prepared bearings. The physical vapour deposition process produces an exceptionally uniform alloy matrix with superior wear resistance, capable of withstanding very high loads.

GLYCO BLEIFREIE SPUTTER-TECHNOLOGIE

Mit einem von Federal-Mogul/Glyco entwickelten Beschichtungsverfahren wird der haltbarste Gleitlager-Werkstoff der heute bekannt ist, in Serie hergestellt. Dieser Werkstoff eignet sich besonders zum Einsatz von Kurbelwellen in spezifisch hochbelasteten Diesel- und Benzinmotoren. Durch Beschießen der Spenderkathode aus einer Aluminium-Zinn-Legierung mit einem hochenergetischen Argon-Plasma, werden die Aluminium- und Zinnatome von der Kathode gelöst und als Gleitschicht auf den speziell präparierten Gleitlagern abgeschieden. Der Prozeß der physikalischen Dampfabscheidung erzeugt eine außergewöhnlich gleichmäßige Legierungsmatrix mit hervorragender Verschleißfestigkeit bei gleichzeitig sehr hoher Belastbarkeit.

GLYCO TECNOLOGIA SENZA PIOMBO SPUTTER

Un processo sviluppato dalla Federal-Mogul/Glyco ha prodotto il più resistente materiale per cuscinetti mai conosciuto, adatto per alberi a gomiti di motori diesel e benzina altamente sollecitati. Bombardando una barra di lega di alluminio e stagno con del plasma, gli atomi di alluminio e stagno vengono liberati dalla barra e depositati sulla superficie di scorrimento dei cuscinetti appositamente preparati. Il processo di deposizione produce una lega eccezionalmente uniforme con superiore resistenza all'usura e capace di supportare carichi molto alti.

TECHNOLOGIE SANS PLOMB GLYCO SPUTTER

Le procédé de dépôt "sputtering" développé par Federal-Mogul/Glyco permet la production du revêtement de coussinet le plus résistant jamais utilisé en série pour résister aux charges les plus élevées des vilebrequins des nouveaux moteurs diesel et essence. En bombardant une cible en alliage aluminium-étain par un plasma d'argon haute énergie, les atomes d'aluminium et d'étain sont libérés de la cible et déposés comme revêtement antifriction sur des coussinets spécialement préparés. Ce procédé de dépôt physique vaporeux produit un alliage exceptionnellement uniforme, d'une excellente résistance à l'usure, capable de supporter de très fortes charges.

GLYCO TECNOLOGÍA SIN PLOMO SPUTTER

El desarrollo de nuevos materiales realizado por Federal-Mogul/Glyco ha permitido obtener el material más duradero conocido para cojinetes, adecuado para aplicaciones que soportan cargas elevadas en cigüeñales de motores gasolina y diesel. Tratando un área concreta de una aleaciòn de aluminio y estaño con un chorro de plasma de argón a elevada energía, los átomos del aluminio y del latón se liberan del área y se depositan en forma de revestimiento antifricción sobre los cojinetes especialmente preparados para ello. El proceso de depositado PVD (Physical Vapor Deposition) produce una aleación excepcionalmente uniforme con mayor resistencia al desgaste, capaz de soportar cargas muy elevadas.

TECHNOLOGIA GLYCO SPUTTER BEZ ZAWARTOŚCI OŁOWIU

Opracowany przez Federal-Mogul/Glyco proces tworzenia materiału umożliwia wytworzenie najbardziej wytrzymałego spośród znanych obecnie materiałów ślizgowych, dostosowanego do wysokich obciążeń panewek wału korbowego w silnikach benzynowych i diesla. W trakcie procesu produkcyjnego plazma argonu o wysokiej energii bombarduje materiał aluminium-cyna, wybijając z niego atomy aluminium i cyny, które z kolei pokrywają specjalnie przygotowaną powierzchnię ślizgową panewki. Ten fizyczny proces osadzania wytwarza niezwykle jednolitą warstwę, posiadającą wyjątkową odporność na zużycie, zdolną do przenoszenia bardzo dużych obciążeń.

GLYCO LEAD-FREE SPUTTER TECHNOLOGY

БЕССВИНЦОВАЯ ТЕХНОЛОГИЯ СПАТТЕРНОГО НАПЫЛЕНИЯ GLYCO

Процесс нанесения материала, разработанный Federal-Mogul/Glyco, позволил создать один из самых износостойких из существующих материалов для подшипников скольжения коленчатых валов высокофорсированных дизельных и бензиновых двигателей. Бомбардировка исходного материала (алюминиево-оловянного сплава) ионами высокоэнергетической аргонной плазмы высвобождает атомы алюминия и олова, и способствует их осаждению на поверхность скольжения специально подготовленных для этой процедуры вкладышей. Процесс испарительного напыления различных металлов и сплавов создает исключительно однородную структуру покрытия с превосходной износостойкостью, способной выдерживать экстремальные нагрузки.

تقنية GLYCO SPUTTER الخالية من الرصاص

قامت شركة Federal-Mogul بتطوير عملية تصنيع المواد التي أسفرت عن أكثر مواد المحمل المعروفة تحملاً كما تعتبر ملائمة لمتطلبات الحمولة الزائدة الخاصة بأعمدة كرنك محركات الديزل والبنزين. من خلال قذف الهدف الأساسي لسبيكة الألومنيوم والقصدير ببلازما غاز الأرجون، تصبح ذرات الألومنيوم والقصدير خالية من الهدف وترسيبها كسطح تشغيل على المحامل المعدة خصيصًا. تنتج عملية الترسيب الطبيعي للبخار قالب سبيكة بصورة استثنائية مما يوفر مقاومة فائقة للبلي وقدرة على مقاومة الحمولات العالية جدًا.

GLYCO HISTORY

2012 Glyco IROX® bearings launched to Aftermarket

2011 Glyco IROX® bearings PACE Award winner - IROX® bearing overlay can help increase the life of crankshafts and bearing shells by more than 5 times

2010 Introduction of novel IROX coating in North America on new A-650 substrate

2009 Glyco® becomes the sole Aftermarket brand for bearings with the widest range as F-M merges AE® and Federal-Mogul bearings range with Glyco®. Introduction of new visual identity, packaging with an anti-counterfeit program and market leader message: **EVERY BEARING YOU NEED**

2007 Federal-Mogul is the first bearing manufacturer who globally presents a full portfolio of lead-free bearing materials for light vehicle and heavy duty industry

2005 Development of laser-welded flange bearings and bushings

2002 Roll-out of A-590 lead-free (successor to A-500) to comply with new European End of life Directive EU 2000/53

2000 Implementation of new MSA electro-plating technology and presentation of high-performance sliding layer G-188

1996 Introduction A-500

1992 Building production line for assembled flange bearings

1991 Introduction A-400

1990 Federal-Mogul acquired Glyco-Metall-Werke

1989 Start of GLYCO Sputter bearings volume production. Introduction of first lead-free bronze bearing material G-149 (copper/aluminium) and G-272 (aluminium/tin/nickel/manganese)

1975 Implementation of roll forming process for bushing production

1971 Implementation of continuous casting technology for aluminium bearings

1970 Introduction of GLYCODUR® dry bearings

1968 Start of production: bearings made of steel/aluminium-tin alloy with or without galvanic sliding layer

1963 Development and implementation of steel/sinter-bronze composite strips

1956 Implementation of three-layer bearings (steel/lead-bronze/galvanic sliding layer)

1953 Start of production: bearings made of steel / lead-bronze compound strips

1938 Implementation of pre-finished and exchangeable two-layer bearings

1936 Development of exchangeable bearings which were fundamental for engine volume production

1928 Introduction in Germany: bearings made of steel / lead-bronze composites

1915 Red bronze bearings for railway, industrial applications and engines for automotive and aircraft industry

1901 GLYCO patent for „Bearing or plate made of robust metal and soft metal“

1897 GLYCO trademark defined for lead-containing bearing metal and foundation of GLYCO Metall Gesellschaft mbH

Die in diesem Katalog jeweils gegebenen Hinweise für Einbau und Verwendung der Gleitlager sind Hinweise ausschließlich für den technisch ausgebildeten und versierten Fachmann, die von ihm im jeweiligen Anwendungsfall auf ihre Eignung geprüft und entschieden werden müssen. Eine Haftung wird von Federal-Mogul für Anwendungsentscheidungen nicht übernommen.
Die Inhalte dieses Katalogs sind nicht dazu bestimmt eine vertragliche Verpflichtung zu begründen oder zu ersetzen, was ausschliesslich einer gesonderten Vereinbarung zwischen 2 konkret bezeichneten Parteien vorbehalten bleibt, wobei der Verkäufer eine unserer Federal-Mogul Gesellschaften sein wird, wie auf der Rückseite des Kataloges.
Die Korrektur von Irrtümern und Änderungen, in besondere auf Grund von geänderten Angaben und Vorschriften der Motorenhersteller, bleibt vorbehalten.

CONDIZIONI GENERALI – IMPORTANTE

La riproduzione di questo catalogo, anche parziale, è permessa soltanto in seguito ad una autorizzazione scritta. I grafici ed i disegni sono a marchio depositato. Reclami per difetti, di qualsiasi natura essi siano, relativi al contenuto di questo catalogo, o all'uso improprio di esso, verranno respiniti. Le pretese avanzate od i reclami dovranno essere in conformita con le nostre condizioni generali di vendita.
Il presente catalogo annulla e sostituisce tutte le edizioni precedenti.
Il catalogo non e un manuale per l'utilizzo ed il montaggio degli cuscinetti. Non contiene indicazioni in questo senso. Esso non sostituisce le descrizioni tecniche, sempre priotarie, in particolare per le tolleranze, ne'le istruzioni relative al montaggio ed alla manutenzione, date dai costruttori dei rispettivi motori. Non puo' in nessun caso essere paragonato alla conoscenza professionale necessaria per il montaggio e l'utilizzo. Le considerazioni sul montaggio degli cuscinetti, fatte su questo catalogo, sono destinate esclusivamente a professionisti con formazione tecnica i quali verificheranno l'esattezza della informazioni, in ogni caso.
Le responsabilita derivanti dall'utilizzo improprio dello stesso non potranno essere addebitate alla Federal-Mogul.
I contenuti del catalogo non sostituiscono in alcun modo gli accordi contrattuali che sono riservati esclusivamente a due contraenti definiti; come venditore si intende una delle societa Federal-Mogul menzionate sul retro del catalogo.
Ci riserviamo di apportare correzioni e/o modifiche, relative, in particolare, a dati o istruzioni ricevute dal costruttore del motore.

CONDITIONS GÉNÉRALES DE VENTE – IMPORTANT

La reproduction de ce catalogue, même partielle, n'est autorisée qu'avec notre accord préalable et par écrit. Les illustrations graphiques et la présentation font l'objet d'un copyright. Nous excluons toutes réclamations ayant pour objet ce catalogue ou pouvant résulter de son incompréhension, portant sur de mauvaises utilisations, manipulations, manutentions ou mauvais stockage. Des droits contractuels et des droits dérivés, de quelque nature qu'ils soient, ne peuvent résulter que d'un accord écrit, particulièrement sur la base de nos conditions générales de vente et de livraison.
Ce catalogue annule et remplace toute édition antérieure.
Le catalogue n'est pas une notice d'utilisation et de montage des coussinets. Il ne contient pas de directives en tant que telles. Le catalogue ne remplace ni les prescriptions techniques, toujours prioritaires, particulièrement pour les tolérances, ni les prescriptions de montage et d'entretien des constructeurs des moteurs figurant dans ce catalogue. Il ne peut en aucun cas remplacer les connaissances professionnelles nécessaires pour le montage et l'utilisation. Les remarques données pour le montage et l'utilisation des coussinets sont exclusivement destinées au professionnel averti et de formation technique, à qui il appartiendra de vérifier la conformité des indications pour chaque cas. La responsabilité des décisions d'utilisation ne peut être prise en charge par Federal-Mogul.
Le contenu de ce catalogue ne peut constituer ou remplacer un contrat qui doit faire l'objet d'un document séparé établi entre 2 parties, dont l'une doit être une entité légale de Federal-Mogul dont la liste figure sur la couverture arrière.
Nous nous réservons le droit d'apporter toutes corrections d'erreurs et modifications, suite notamment à de nouvelles données fournies par les constructeurs.

CONDICIONES DE VENTA – IMPORTANTE

Queda totalmente prohibida la reproducción, total o parcial, del contenido de este catálogo, salvo previa autorización nuestra, realizada por escrito. Están, asimismo, reservados todos los derechos sobre el diseño y presentación del catálogo. No se aceptará ningún tipo de reclamación que esté basada en la interpretación de los datos contenidos en este catálogo, así como en el incorrecto uso, manipulación o almacenaje de nuestras piezas. Unicamente se aceptarán reclamaciones que estén basadas en derechos contractuales o en los motivos arriba indicados, siempre que exista un acuerdo especial y por escrito basado en nuestras condiciones generales de venta y suministro.
Con la edición de este catálogo queda anulada toda la información contenida en catálogos anteriores.
El catálogo no es un manual para el uso e instalación de los cojinetes, y no representa una asesoría técnica, en el sentido legal. Los datos del catálogo no sustituyen, en ningún caso, a las especificaciones técnicas, tanto en lo que se refiere a tolerancias como a las instrucciones de instalación y mantenimiento, indicadas por los fabricantes de los motores, especificaciones que serán siempre prioritarias. Se entiende que el uso y montaje de estas piezas está encomendado a personal debidamente cualificado. Las indicaciones sobre uso y montaje de los cojinetes contenidas en este catálogo, están exclusivamente dirigidas a profesionales con la debida capacitación y formación técnica, que deben decidir en cada caso sobre la exactitud de las mismas. La responsabilidad de estas decisiones no puede ser, en ningún caso, achacada a Federal-Mogul.
La información facilitada en el catálogo no representa o sustituye ningún tipo de acuerdo, quedando a tal efecto, el acuerdo por separado entre dos partes donde sólo entidades de Federal-Mogul, pueden ser identificadas como la parte vendedora como se menciona en la contraportada.
Los datos e instrucciones contenidos en este catálogo podrán ser corregidos o modificados sin previo aviso.

WARUNKI PROWADZENIA BIZNESU – WAŻNE

Reprodukcja tego katalogu lub jego części jest możliwa tylko za wyraźną zgodą na piśmie. Ilustracje i grafika są chronione prawem autorskim. Roszczenia dotyczące szkód, niezależnie od formy, wynikających z przedstawionych w tym katalogu treści lub z nieprawidłowego użycia, zastosowania, przechowywania lub obsługi są w sposób wyraźny wyłączone. Prawa umowne i inne wynikające lub związane z roszczeniami na nimi opartymi, niezależnie od formy, są tworzone na podstawie oddzielnej umowy pisemnej, w szczególności na podstawie naszych ogólnych warunków sprzedaży i dostawy.
Wszystkie wcześniejsze oświadczenia tracą ważność wraz z opublikowaniem tego katalogu.
Katalog nie jest instrukcją obsługi i instalacji łożysk silnikowych. Nie zawiera porad w sensie prawnym. Katalog nie zastępuje obowiązujących uregulowań technicznych – zwłaszcza w zakresie tolerancji – ani opisów montażu i konserwacji poszczególnych producentów silników.
Nie jest również możliwe pominięcie doświadczenia osób dokonujących doboru i przeprowadzających montaż części. Poszczególne odniesienia zawarte w tym katalogu, a dotyczące doboru, montażu i stosowania łożysk silnikowych, są instrukcjami wyłącznie dla wykwalifikowanego technicznie specjalisty, który w każdym przypadku musi je sprawdzić i zweryfikować ich przydatność. Federal-Mogul nie przyjmuje odpowiedzialności za decyzje dotyczące zastosowania.
Zawartość tego katalogu nie stanowi ani nie zastępuje umowy, która może być zawarta jedynie jako oddzielny dokument podpisany przez dwie strony, przy czym sprzedawcą może być tylko jedna z jednostek koncernu Federal-Mogul, zgodnie z opisem na wewnętrznej stronie tylnej okładki.
Zachowane zostaje prawo korygowania błędów i wprowadzania zmian, zwłaszcza odnośnie zmian dotyczących parametrów i warunków pracy określonych przez producentów silników.

TERMS OF BUSINESS

УСЛОВИЯ ДЕЛОВОГО СОТРУДНИЧЕСТВА – ВАЖНО

Копирование данного каталога или его частей дозволяется исключительно при получении нашего разрешения в письменной форме.
Иллюстрации и дизайн защищены авторским правом. Требования о возмещении ущерба любой формы, исходя из содержания каталога или из-за неправильного использования, хранения или обращения, абсолютно исключены. Договорные права и любые результирующие или связанные с этим требования, независимо от их формы, должны являться частью отдельного письменного соглашения и основываться на наших общих условиях продаж и поставок.
Все прежние утверждения теряют свою юридическую силу с момента публикации данного каталога.
Каталог не является руководством пользователя и инструкцией по установке. Оно не содержит советов в юридическом понимании этого слова. Каталог не является заменой для издаваемых производителями двигателей технических инструкций по ремонту, в особенности для допусков технических величин, а также инструкций по монтажу и регламентному обслуживанию. Отдельные ссылки для установки и замены комплектующих, приведенные в этом каталоге, являются инструкциями исключительно для технически компетентного специалиста и в каждом случае должны быть проверены им на предмет их пригодности. Federal-Mogul не несет ответственность за ремонтные работы.
Содержимое каталога не предназначено для создания или замены любого контрактного соглашения, которое может быть оформлено только в виде отдельного соглашения между двумя установленными сторонами, где продавцом может являться только одно из юридических лиц Federal-Mogul, как упомянуто на внутренней стороне обложки каталога.
Federal-Mogul оставляет за собой право вносить исправления и изменения в частности в отношении поправок по деталям изготовителей двигателей и их условиям.

هام

يحظر نسخ أي جزء من هذا الكتالوج دون موافقة صريحة كتابية منا. جميع حقوق التصوير والتصميم محفوظة. إن المطالبات بالتعويض عن أي تلفيات من أي نوع مهما كانت، والتي تنتج عن التفاصيل المقدمة بهذا الكتالوج أو عن الاستخدام غير الصحيح، أو التطبيق غير السليم أو التخزين أو التعامل مستبعدة هنا بوضوح. تأتي حقوق التعاقد أو أي متطلبات ناتجة أو ذات صلة بالاعتماد على ذلك -بغض النظر عن النموذج- أولاً كي تكون على أساس اتفاق مكتوب منفصل، وعلى وجه الخصوص، على أساس الشروط العامة للبيع والتوصيل.
تصبح جميع البيانات السابقة لاغية في حالة نشر هذا الكتالوج.
ولا يعد هذا الكتالوج دليل تشغيل لاستخدام وتركيب محامل المحركات. ولا ينطوي على أي نصيحة ذات معنى قانوني. كما أن هذا الكتالوج لا يحل محل التنظيمات الفنية سارية المفعول بصفة دائمة - وبصفة خاصة قدرات التحمل - ولا اشتراطات التركيب والصيانة المحددة من قبل جهة تصنيع المحرك.
كما أنه ليس ممكنًا الامتناع عن تقديم الخبرة للقائمين بعملية التركيب والتطبيق. إن الإشارات الفردية المقدمة في هذا الكتالوج بشأن التركيب والتطبيق للصمامات والمكونات هي إرشادات فقط للمتخصصين المؤهلين فنيًا وينبغي عليه مراجعتها والتحقق منها لمناسبتها لكل حالة. لا تتحمل شركة Federal-Mogul أي مسؤولية تتعلق بمسائل الاستعمال.
لا تستهدف محتويات الكتالوج إبرام أي اتفاق تعاقدي يجب الاحتفاظ به أو تبديله باستثناء الاتفاق المنفصل بين الطرفين المحددين، وبناءً عليه لا يكون البائع إلا أحد كيانات شركة Federal-Mogul كما هو مدون على صفحة الغلاف الخلفية.
الحقوق محفوظة لتصحيح الأخطاء وعمليات التغيير، خاصة فيما يتعلق بالتعديلات الطارئة على تفاصيل واشتراطات جهات تصنيع المحركات.

Nüral®

FITTED WITH GOETZE® RINGS

MORE THAN 4x LONGER SERVICE LIFE

DuraBowl®

- Re-melting the alloy around the bowl
- Enhanced microstructure in the alloy
- Improves the fatigue strength of the aluminium where it is most needed

The Nüral DuraBowl® piston increases service life by more than 4 times under severe operating conditions when compared with a conventional cast piston.

The DuraBowl® design strengthens the crown of the piston by locally re-melting the alloy around the bowl.

Nüral DuraBowl® pistons can operate at temperatures beyond 400°C and cylinder pressure between 200 – 250 bar and are applicable if fitted as Original Equipment.

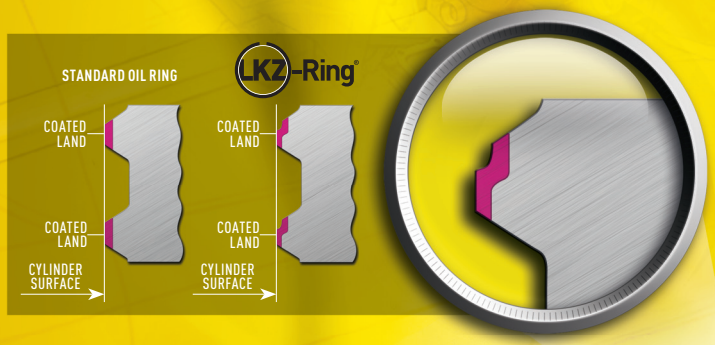
AT THE HEART OF ENGINE EFFICIENCY

FEDERAL MOGUL · GLYCO · GOETZE · Nüral · Payen

www.fmecat.eu

GOETZE®

UP TO 50% LESS OIL CONSUMPTION



The Goetze LKZ-Ring® is a unique patented two-piece stepped design oil ring.

Up to 50% reduction in oil consumption is achieved by lowering tension and friction losses inside the cylinder.

The LKZ-Ring® is applicable to the latest diesel and direct-injection petrol engines if fitted as Original Equipment.

* Para ref. antigua AE/F-M multiplicar la nueva ref. Glyco por

Federal-Mogul
ADVANCED ANTI-COUNTERFEIT PROGRAMME

The following features on all engine packaging prove that the parts inside are Original Quality.

CHECK THE UNIQUE CODE ONLINE AT www.fmecat.eu

Each Federal-Mogul part has a unique code which is displayed on the labels in an alphanumeric and Data Matrix format.
A Data Matrix code is a 2-dimensional (2-D) matrix barcode.
The Unique Code can be verified in 3 different ways:

- Typing in the Unique Code
- Reading the 2-D code with a 2-D scanner
- Reading the 2-D code with a mobile phone which is supported by NeoReader™ (www.neoreader.com)

For further details please check www.fmecat.eu

LOOK FOR THE HOLOSPOT®

The Holospot® label features a 4-digit alphanumeric code.
Please check it to make sure that:

- The 4-digit code appears in rainbow colours using the light of the magnifier and is different on each pack
- The Federal-Mogul logo also appears in the Holospot®. The last 4 digits of the alphanumeric code have to be the same as the ones in the Holospot®

PROTECTION

Special label design means any attempt to remove or swap the label will result in tearing

PERMANENT SELF-ADHESIVE LABEL

Seals the box with label detail on the front

CRASH LOCK BOX BOTTOM

Prevents any attempt to remove or exchange items as it is impossible to reseal once opened

Verify the Unique Code online at www.fmecat.eu
